

**Supplementary Material:**

**Figure S1.** RNAseq results for *sbtB*/AN0218. Upper and lower images show mapping of reads corresponding to a  $\Delta flbB$  strain during vegetative growth (VG) or five hours after the induction of asexual development (AD) [1]. IGV (Integrative genomics viewer) software [2] was used. The lower image corresponds to an amplification of the intronic region within exon 3 not predicted by the AspGD database. The sequence of the 21 amino acid-long region that would derive from this intron is also shown.

**Figure S2.** Procedure followed for the generation of null mutants of *Aspergillus nidulans*. A) The 5'- and 3'-UTR regions of the targeted gene plus the selection marker were amplified in three independent PCR reactions. In the second PCR reaction, the selection marker (*pyrG<sup>Af</sup>* or *riboB<sup>Af</sup>*, *pyrG* or *riboB* genes from *A. fumigatus*) incorporated tails complementary, respectively, to the end and beginning of 5'- and 3'-UTR regions. The three fragments were fused in a fourth PCR reaction (fusion-PCR; [3]). The construct was used to transform protoplasts of recipient strains TN02A3, TN02A25 [4] or MAD6425. Selection of transformants was done based on their ability to grow on medium without uridine and uracil (*pyrG<sup>Af</sup>* as selection marker) or without riboflavin (*riboB<sup>Af</sup>* as selection marker). B) Table showing the strains generated in this work, the fusion-PCR constructs used to generate them and the corresponding recipient strains. See also Table S1.

**Table S1.** Strains used in this work.

Strain	Genotype	Reference
BD533	<i>pyrG89; argB2, ΔsbtA::pyrG<sup>Af</sup>; pyroA4, ΔnkuA::argB</i>	This work
BD535	<i>pyrG89; argB2; pyroA4, ΔnkuA::argB; ΔsbtD::pyrG<sup>Af</sup></i>	This work
BD536	<i>pyrG89; ΔsbtE::pyrG<sup>Af</sup>; argB2; pyroA4, ΔnkuA::argB</i>	This work
BD537	<i>pyrG89; argB2; pyroA4, ΔnkuA::argB; ΔsbtB::pyrG<sup>Af</sup></i>	This work
HHF27a	Prototrophic wild type	[5]
HHF27b	<i>ΔsltA::riboB<sup>Afum</sup></i>	[5]
MAD1685	<i>inoB2; ΔsltA::riboB<sup>Af</sup></i>	[6]
MAD1686	<i>ΔhalA::pyr4<sup>Nc</sup>; inoB2</i>	[6]
MAD2666	<i>argB2; pyroA4, ΔnkuA::argB</i>	[7]
MAD2757	<i>wA3; ΔhalA::pyr4<sup>Nc</sup>; inoB2; ΔsltA::riboB<sup>Af</sup></i>	[6]
MAD4048	<i>pyrG89, pabaA1; sltA1</i>	[8]
MAD5423	<i>inoB2; ΔnkuA::BAR?; sltA114; riboB2</i>	[8]
MAD6424	<i>pyrG89; argB2; ΔnkuA::argB, pabaB22; ΔsB::pyrG<sup>Af</sup>; riboB2</i>	This work
MAD6425	<i>pyrG89; argB2; ΔnkuA::argB, pabaB22; ΔsbtB::riboB<sup>Af</sup>, riboB2</i>	This work
MAD6426	<i>pyrG89; argB2, ΔsbtA::pyrG<sup>Af</sup>; ΔnkuA::argB, pabaB22; ΔsbtB::riboB<sup>Af</sup>, riboB2</i>	This work
TN02A3	<i>pyrG89; argB2; pyroA4, ΔnkuA::argB</i>	[4]
TN02A25	<i>pyrG89; argB2; ΔnkuA::argB, pabaB22; riboB2</i>	[4]

All strains carry *veA1* mutation. BAR, herbicide bialaphos resistance gene from *Streptomyces hygroscopicus*
