**Table S3.** Variations in water budget during the period 1971–2017 by considering three subperiods (1971–1986; 1986–2000, and 2000–2017).

(mm/year)	1971–1986	1986–2000	2000–2017	1971–2017
$\Delta P$	-60	110	-10	40
$\Delta ETR$	-55	85	5	40
$\Delta P_u$	-20	80	70	130
$\Delta Q_v$	-15	55	85	125

**Figure S1.** Potential evapotranspiration (black line) computed with the Thornthwaite and Mather method ([44]). The red line is the potential evapotranspiration trend space state model obtained by Kalman filtering ([46,47]). The blue lines indicate the 90% confidence interval and the green lines indicate the 90% prediction interval for the original model object.

**Figure S2.** Real evapotranspiration (black line) computed with the Turc method ([45,52]). The red line is the real evapotranspiration trend space state model obtained by Kalman filtering ([46,47]). The blue lines indicate the 90% confidence interval and the green lines indicate the 90% prediction interval for the original model object.
