Impact of Storage Conditions on the Methanogenic Activity of Anaerobic Digestion Inocula

Sergi Astals, Konrad Koch, Sören Weinrich, Sasha D. Hafner, Stephan Tait, Miriam Pece

Table SI. Impact of storage temperature and time on DSS specific methanogenic activity ($\text{gCOD}\cdot\text{gVS}^{-1}\cdot\text{d}^{-1}$). Results are expressed as average \pm 95% confidence interval ($n = 3$).

Storage time	Refrigerator (4 °C)	Room temperature (22 °C)	Incubator (37 °C)
7 d	0.132 \pm 0.007	0.133 \pm 0.005	0.083 \pm 0.006
14 d	0.125 \pm 0.005	0.119 \pm 0.006	0.037 \pm 0.005
21 d	0.117 \pm 0.007	0.104 \pm 0.006	0.014 \pm 0.003

¹ The fresh inoculum (non-stored) had an SMA of $0.131 \pm 0.008 \text{ gCOD}\cdot\text{gVS}^{-1}\cdot\text{d}^{-1}$

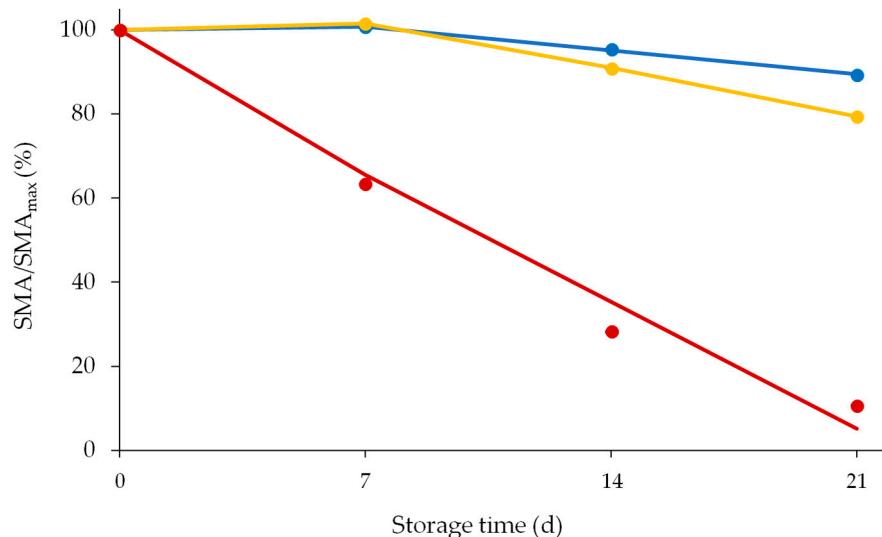

Figure SI. Experimental (dots) and regression model (solid line) representing the evolution of methanogenic activity at 4 °C (blue), 22 °C (yellow) and 37 °C (red).
