Phycoremediation of Landfill Leachate with Desmodesmus subspicatus: A Pre-Treatment for Reverse Osmosis

Marina Kholomyeva *, Radek Vurm, Lucia Tajnaiová, Marek Šír, Mariya Maslova and Vladimír Kočí *

Supplementary Materials

1. Statistical Analyses

1.1. Analysis of Correlation

Table S1. Correlation matrices for the assessment of correlation between the initial parameters and dilutions of the LL and pollutant removal. The tested means: remaining TAN concentration (PAR 1); remaining Fe concentration (PAR 2); initial TAN concentration (PAR 3); and initial Fe concentration (PAR 4). For each pair the r-value was determined.

| • | | | | |

| PAR4 | -0.179 | 0.9984 | -0.2298 | 1 |

Table S2. Test of correlations between the biomass concentration and Fe/TAN removal efficiency.

| Pollutant | r-value |
|-----------|---------|
| TAN | 0.79 |
| Fe | 0.81 |

1.2. One–Way Analysis of Variance (ANOVA) and Tukey–Kramer Multiple Comparison Test (p = 0.05)

Table S3. One–way analysis of variance for determination whether group mean differences exist in the values of remediation efficiency between the particular leachates and dilutions (p = 0.05).

| | Between Leachates | Between | Between Dilutions | | | | |
|-------------|-------------------|---------|-------------------|------------|------------|--------|---------|
| | | A | В | С | D | Е | F |
| Fe removal | 4.6217E-16* | / | 0.298 | / | 8.7E-13 * | 0.787 | 0.054 |
| TAN removal | 6.90774E-22* | 0.282 | 0.094 | 8.14E-05 * | 9.62E-05 * | 0.2408 | 0.004 * |

^a for the means with p-values followed by the "*" sign, a subsequent Tukey—Kramer test was performed; ^b "/" sign indicates that the analysis of variance was not performed, because all group means had the same value.

Table S4. Tukey — Kramer multiple comparison test (p = 0.05).

To evaluate statistical significance, the mean absolute differences and a critical value were compared. Means followed by the "*" sign differ by Tukey – Kramer test.

2. BBM Medium composition for Microalgae Cultivation

Table S5. BBM medium composition.

| Component | Stock Solution (to 1 litre dH2O) | Quantity Used (to 1 litre) | | |
|---|-------------------------------------|-------------------------------|--|--|
| NaNO ₃ | 25.00 g | 10 ml | | |
| CaCl ₂ .2H ₂ O | 2.50 g | 10 ml | | |
| MgSO ₄ .7H ₂ O | 7.50 g | 10 ml | | |
| K ₂ HPO ₄ | 7.50 g | 10 ml | | |
| KH ₂ PO ₄ | 17.50 g | 10 ml | | |
| NaCl | 2.50 g | 10 ml | | |
| EDTA solution: | | | | |
| EDTA | 50.00 g | 1 ml | | |
| КОН | 31.00 g | | | |
| Acidifed iron solution | <u> </u> | | | |
| FeSO ₄ .7H2O | 4.98 g | 1 ml | | |
| H2SO4 (96%) | 1.00 ml | | | |
| H_3BO_3 | 11.42 g | 1 ml | | |
| Trace metals solution | _ | | | |
| ZnSO ₄ .7H ₂ O | 8.82 g | | | |
| MnCl ₂ .4H ₂ O | 1.44 g | 11 | | |
| MoO_3 | 0.71 g | 1 ml | | |
| CuSO ₄ .5H ₂ O | 1.57 g | | | |
| Co(NO3) ₂ .6H ₂ O | 0.49 g | | | |
