

**Wildfires as a source of PAHs in surface waters in background regions
(Lake Baikal, Russia)**

Alexander G. Gorshkov*, Oksana N. Izosimova, Olga V. Kustova, Irina I. Marinaite, Yuri P. Galachyants, Valery N. Sinyukovich, and Tamara V. Khodzher

Limnological Institute, Siberian Branch of the Russian Academy of Sciences, 3, Ulan-Batorskaya St.
3, 664033, Irkutsk, Russia

Supplementary date:

Tables S1: Toxicity equivalency factors (TEF), risk quotient for negligible concentrations (RQ_{NSs}) and risk quotient for the maximum permissible concentrations (RQ_{MPCs}) of the individual and total PAHs in water;

Table S2: Concentration range (mean/median) for the detected PAHs in the upper water layer of the pelagic zone of Lake Baikal (the monitoring from 2015 to 2020);

Table S3: Concentration range for the detected PAHs in the aerosol above the water surface; Table S4: PAH ratios in Baikal aerosol during wildfires in adjacent areas;

Table S5: Σ PAH concentrations in waters of the tributaries of Lake Baikal;

Table S6: Estimation of the influx of PAHs to Lake Baikal with the Baikal tributaries;

Table S7: The concentration range for detected PCB indicator congeners in aerosol above the water surface;

Table S8: The benzo[a]pyrene equivalent concentrations of PAHs in the upper water layer of the pelagic zone of Lake Baikal;

Table S9: Risk quotient for negligible concentrations (RQ_{NSs}) and the maximum permissible concentrations (RQ_{MPCs});

Table S10. Concentration Σ PAHs in the water column of Lake Baikal (400 m), ng/L.

Table S1. Toxicity equivalency factors (TEF), risk quotient for negligible concentrations (NCs) and risk quotient for maximum permissible concentrations (MPCs) for the individual and total PAHs in water [49-51]
