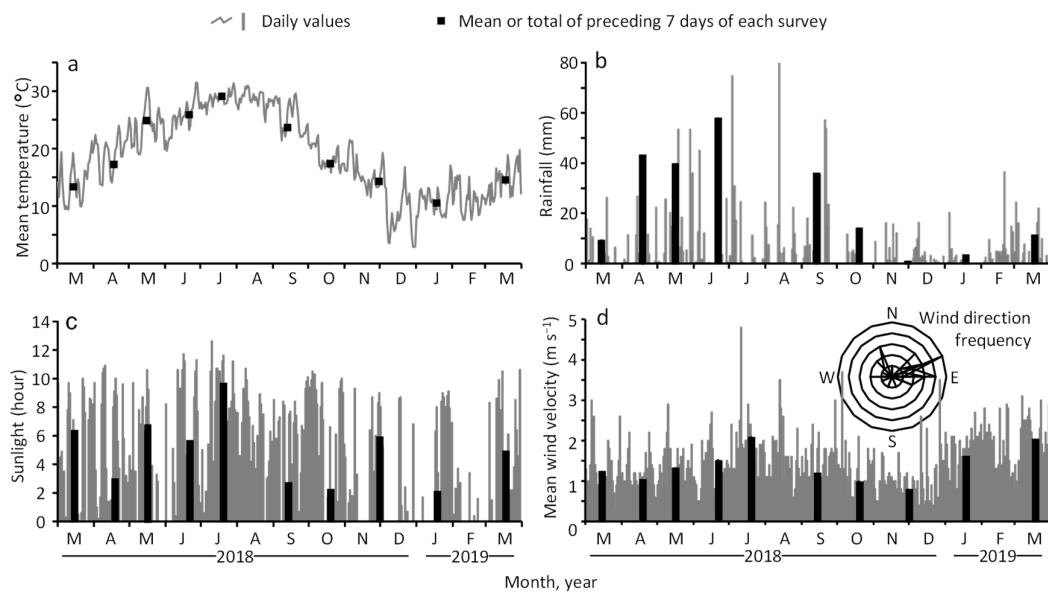

Figure S1. Rainfall (a), sunlight hour (b), mean air temperature (c), mean wind velocity, and wind direction (d) during the study period at the meteorological station in Wenzhou City. Gray bars and lines are daily values and black bars and squares are mean or total of preceding 7 days of survey each month.

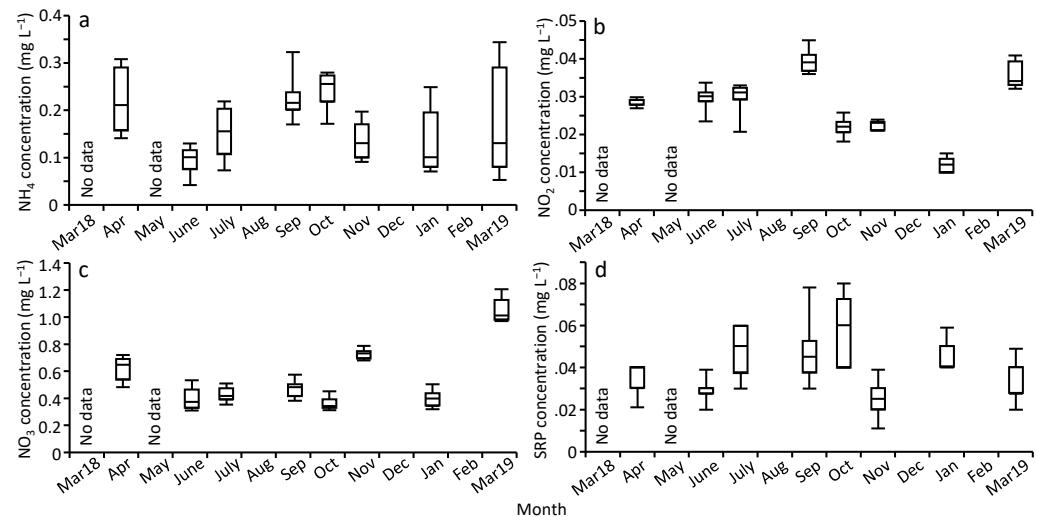

Figure S2. A box plot of nutrient concentrations ((a): $\text{NH}_4^+ \text{-N}$, (b): $\text{NO}_2^- \text{-N}$, (c): $\text{NO}_3^- \text{-N}$, (d): SRP) measured at 6 sites and 2 vertical layers in MA. The box plot shows 10, 25, 50, 75, 90 percentiles of concentrations each month.

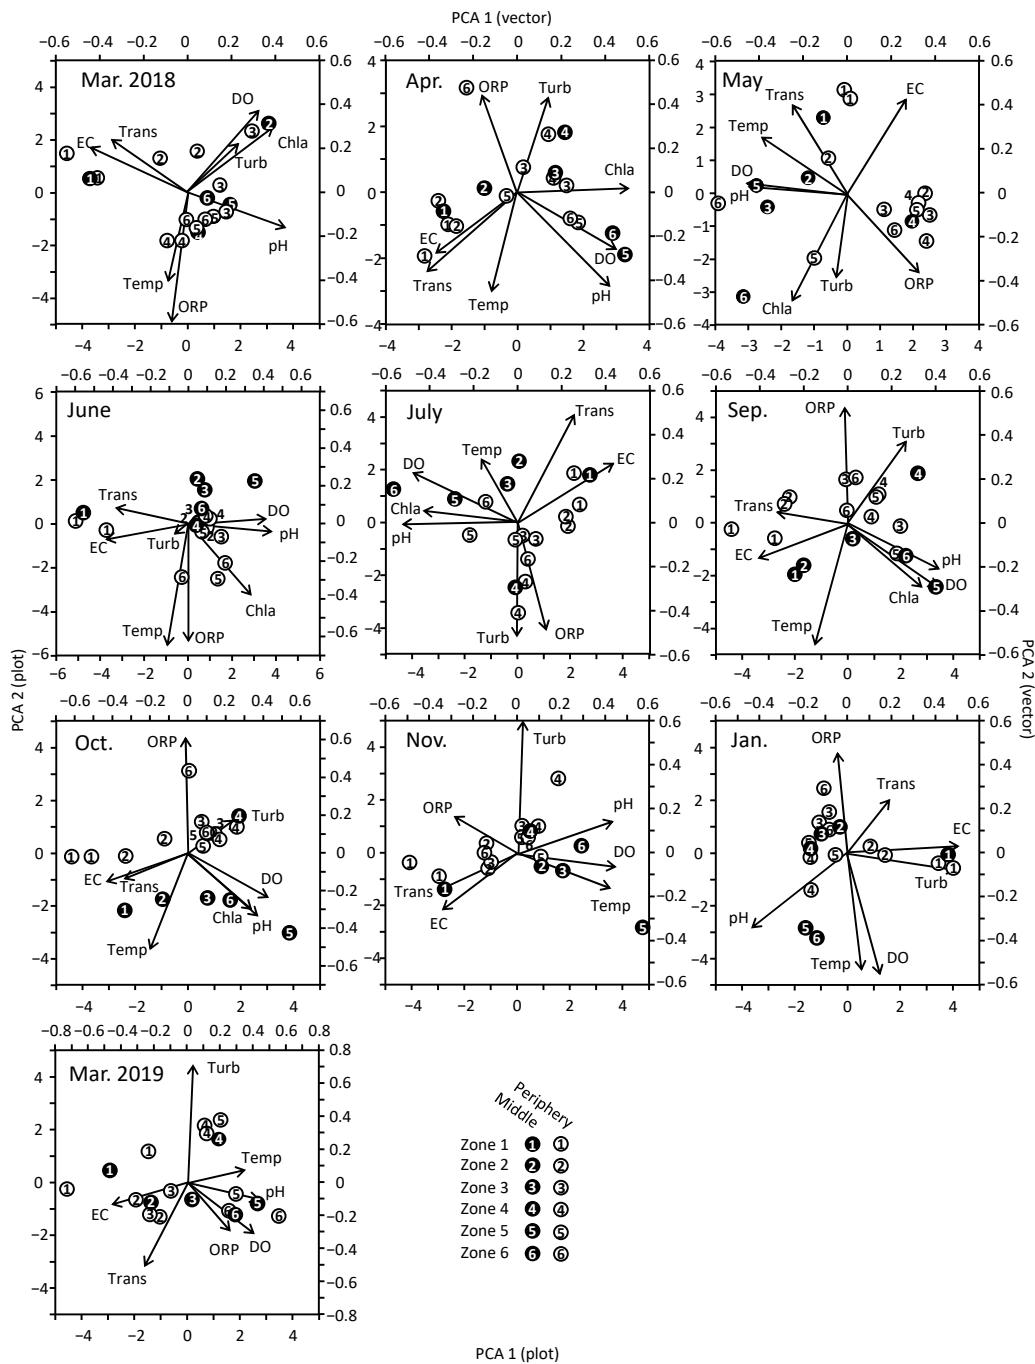

Figure S3. Principal component analysis (PCA) diagram of water quality variables performed for 18 survey sites in MA for each month.
