

Figure S1. Comparison of (a) maximum temperature (average of May - September), (b) minimum temperature (average of May - September), (c) average temperature (average of May - September) and (d) precipitation (total of May - September) from 1980 to 2019 among wild blueberry fields in Downeast Maine. The climate variables are represented as the Mean \pm Standard error ($n = 40$; where 40 represents the years from 1980 to 2019).
