		(29.6%)	(70.4%)										

N: Nodes; E: Edges; avgCC: Average clustering coefficient; APL: Average path length; ND: network diameter; AD: Average degree; GD:

Graph density; σ : small-world coefficient.

$\sigma = (\text{avgCC}/\text{avgCC}_r)/(\text{APL}/\text{APL}_r)$ and $\sigma > 1$ indicates “small-world” properties.
