

## *Supplementary Information*

**Table S1.** Overview of the locations of the flush samples in the distribution system (DWDS) Zeeuws-Vlaanderen.

Part of DWDS	Location	Research period	Inner diameter (mm)	Pipe material	Year of construction of eldest part
Eastern section	Heikant	2011-2022	88	AC	1950
	Hulst	2011-2017	100	AC	1977
		2018-2022	113	AC	1900
	Nieuw Namen	2011-2022	88	AC	1950
Western section	Axel	2011-2018	100	PVC	1993
		2019-2022	106.7	PVC	1998
	Cadzand	2011-2022	100	AC	1979
	Philippine	2011-2022	106.7	PVC	1992

AC: asbestos cementon; PVC: polyvinylchlorid

**Table S2.** Sampling scheme, parameters and frequencies per location.

Sampling location	Parameter	Season	Number of samples per year	
Drinking water at treatment plant			TP#2	TP#9
	pH	whole year	52	26
	Fe	whole year	26	104
	Mn	whole year	26	104
	DOC	whole year	13	4
	BP LC-OCD	whole year	13-52 (since 2015)	4 (since 2020)
	Biomass ATP	whole year	52	13
	BPC <sub>14</sub>	whole year	26 (since 2019)	4 (since 2019)
	AOC A3	whole year	8 (since 2019)	4 (since 2020)
	AOC P17/NOX	whole year	8-13	1-4
Drinking water in DWDS			West section	East section
	Invertebrates	August - October	3	3
	Sediment volume	August - October	3	3
	Turbidity test	May-August	40	17
Drinking water at the tap of households			West section	East section
	Aeromonas at 30 °C	July-September	21-55	8-18
	Heterotrophic Plate Count at 22°C	July-September	26-98	8-27
	Fe	whole year	6	26

**Table S3.** ANOVA test (F-value, df1; df2 and p-value) of different parameters and comparison per period (Games-Howell post-hoc test, p-value).

Parameter	Zeeuws-Vlaanderen western section			Zeeuws-Vlaanderen eastern section		
	ANOVA 2011-2014 versus 2015- 2018	ANOVA 2011-2014 versus 2019- 2022	ANOVA 2015-2018 versus 2019- 2022	ANOVA 2011-2014 versus 2015- 2018	ANOVA 2011-2014 versus 2019- 2022	ANOVA 2015-2018 versus 2019- 2022
Aeromonas at 30 °C	F=5.88; df1 2; df 2 291; <0.01	n.s.	n.s.	<0.01 15-18 > 19-22	F=65,3; df1 2; df2 101; <0.001 15-18 > 11-14	<0.001 19-22 > 11-14 <0.001 19-22 > 15-18
Heterotrophic Plate Count at 22°C	F=14.6; df1 2; df2 331; <0.001	<0.001 11-14 > 15-18	<0.001 11-14 > 19-22	n.s.	F=35.6; df1 2; df2 133; <0.001	n.s. <0.001 19-22 > 11-14 <0.001 19-22 > 15-18
Sediment volume 100 µm	F=0.126; 2 df; df2 22; n.s.				F=1.31; df1 2; df2 19; n.s.	
Invertebrate biomass	F=0.794; df1 2; df2 22; n.s.				F=7.88; df1 2; df2 19; <0.01	<0.05 19-22 > 11-14 <0.01 19-22 > 15-18

**Table S4.** Results of the Mann-Whitney test of results of a drinking water turbidity test induced by an increase op the velocity with 0.25 m/s in the distribution pipes and the Fe concentrations in the sediment of flush samples of the DWDS; U-value = Test statistic of Mann-Whitney test; sd = standard deviation; n = number of samples.

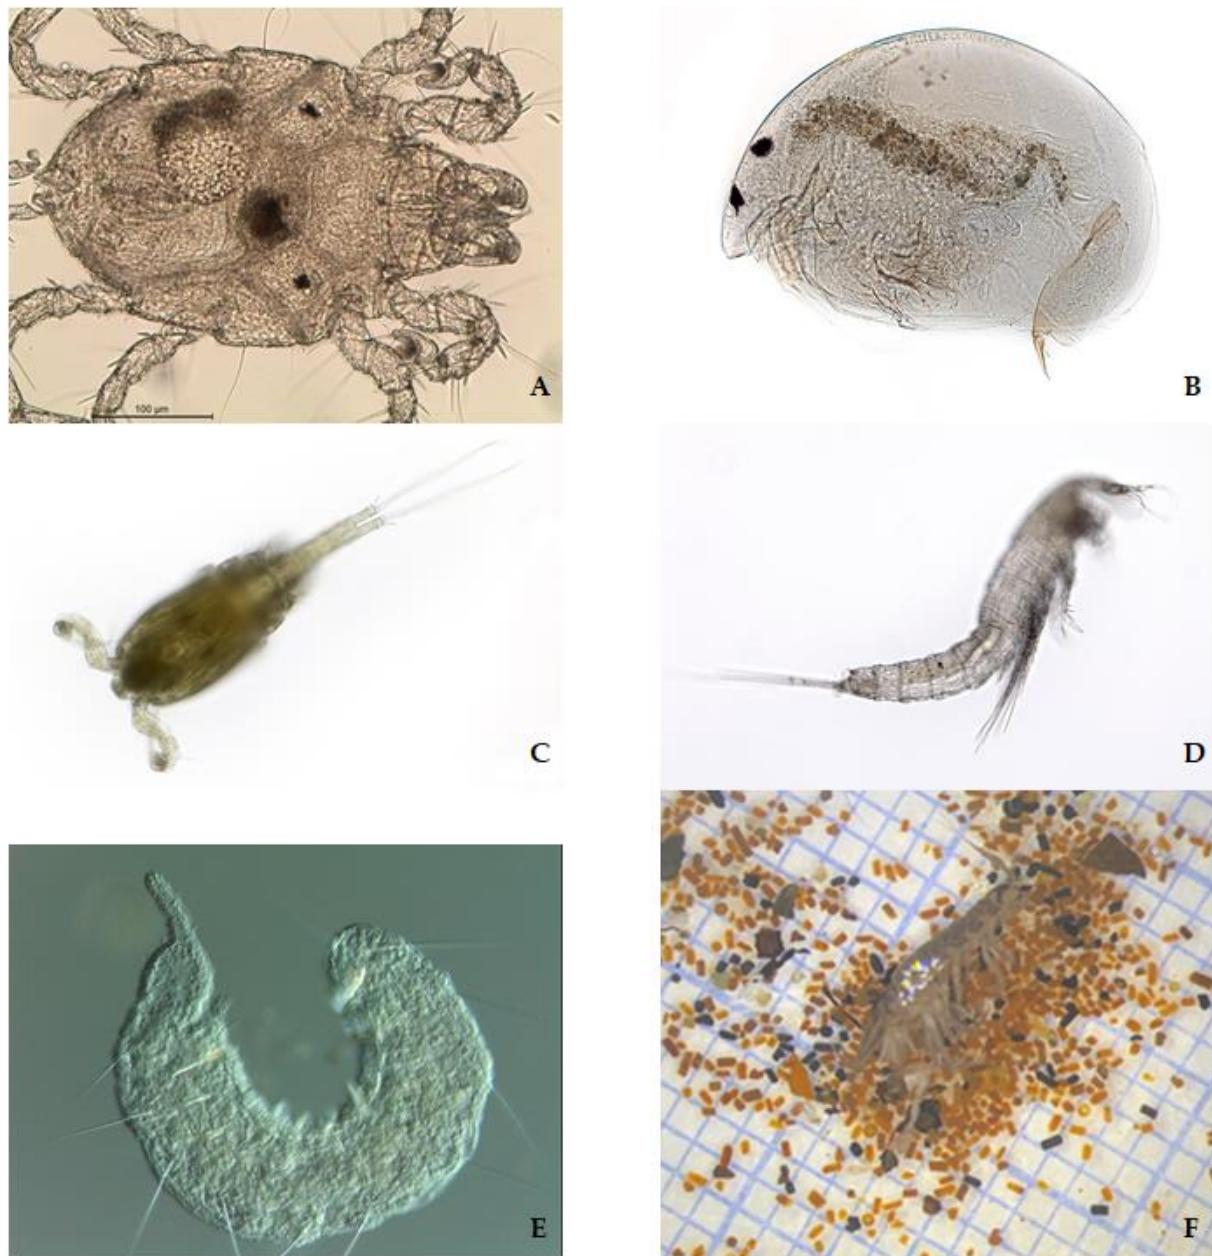

Turbidity (2019-2021)	Western section	Eastern section
U-value		3077
p-value		<0.001
average±sd (FNU)	8.9±13.4	27.6±12.2
n	160	67
Fe in sediment of flush samples (2014-2022)	Western part	Eastern part
U-value		113
p-value		<0.001
AVERAGE ±sd (mg/L)	0.9±1.1	3.5±3.1
n	27	27

**Table S5.** Biomass (mg FW/m<sup>3</sup>) per taxon in the individual flush samples.

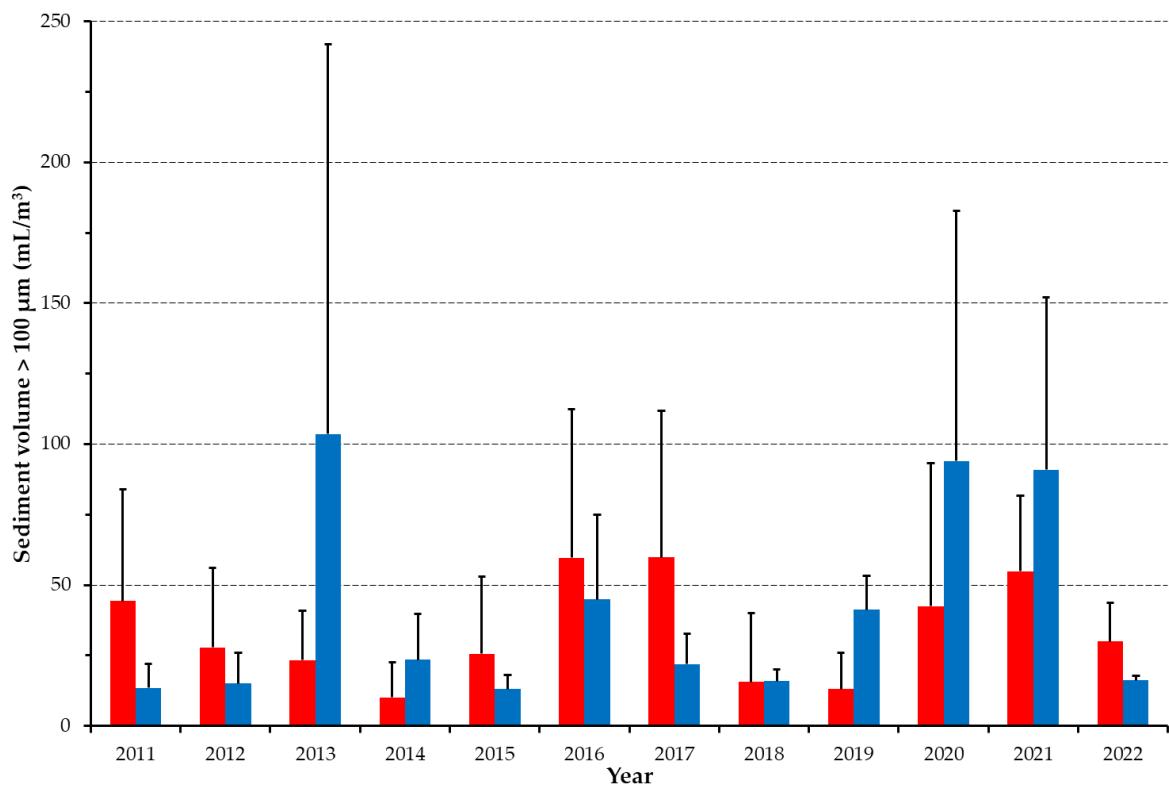

Section	Year	Location	Chydoridae	Halacaridae	nauplius larvae of copepods	Cyclopoida	Harpacticoida	<i>Asellus</i> <i>aquaticus</i>	Turbellaria	Oligochaeta	other invertebrates
