^aSolub.: solubility (mg/L) in water at 25°C. ^blog Kow (octanol–water partition coefficient) and log Koc (soil organic carbon–water partitioning coefficient) was obtained by the Estimation Programs Interface (EPI) Suite developed by the US EPA and Syracuse Research Corp. ^cBCF: bioconcentration factor (L/kg wet weight).

Table S2. Adsorption Classifications (Estimating Physical/Chemical and Environmental Fate Properties with EPI Suite™. Sustainable Futures/Pollution Prevention (P2) Framework Manual. EPA-748-B12-001. U.S. Environmental Protection Agency, OCSPP)

Log K _{oc}	Adsorption Classifications
> 4.5	Very strong sorption to soil / sediment, negligible migration to ground water
3.5 - 4.4	Strong sorption to soil / sediment, negligible to slow migration to ground water
2.5 - 3.4	Moderate sorption to soil / sediment, slow migration to ground water
1.5 - 2.4	Low sorption to soil / sediment, moderate migration to ground water
< 1.5	Negligible sorption to soil / sediment, rapid migration to ground water
