**Figure S2.** Relationships between measured SOC content in 20-50 cm layer and measured SOC content in 50-100 cm layer of group 1 (a), between measured SOC content in 50-100 cm layer and predicted SOC content in 50-100 cm layer of group 2 (b), between measured SOC content in 20-50 cm layer and measured SOC content in 50-100 cm layer of group 1 and 2 (c).

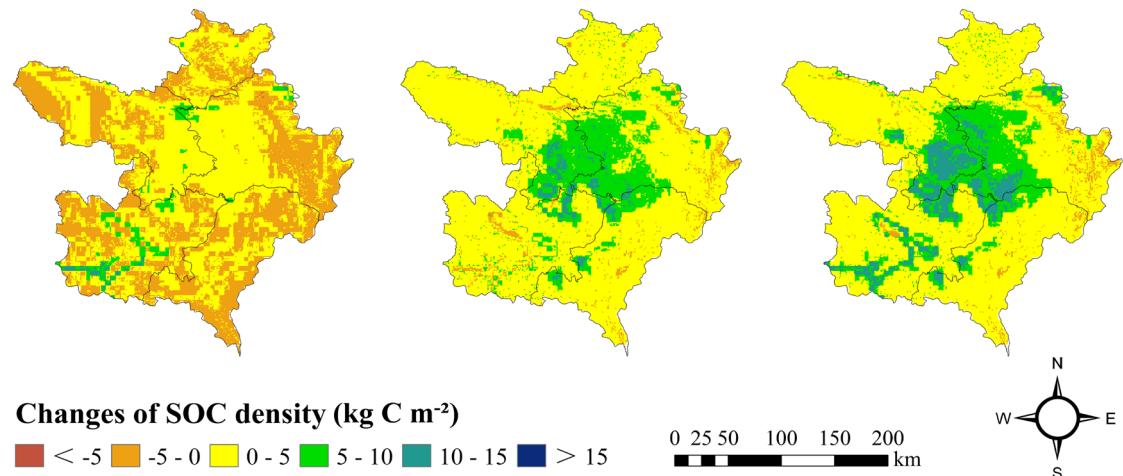

**Figure S3.** Comparison between estimated and observed SOC at the training and testing phases in the three soil layers. (a) , (b) and (c) are samples in the 0-20 cm, 20-50 cm and 50-100 cm soil layers. The blue line shows the performance of the model in the training samples and the lightgreen one indicates that in the testing samples. The grey dashed line shows the prediction accuracy of the model compared to all measurements, including training and testing samples.  $R^2$ , coefficient of determination.

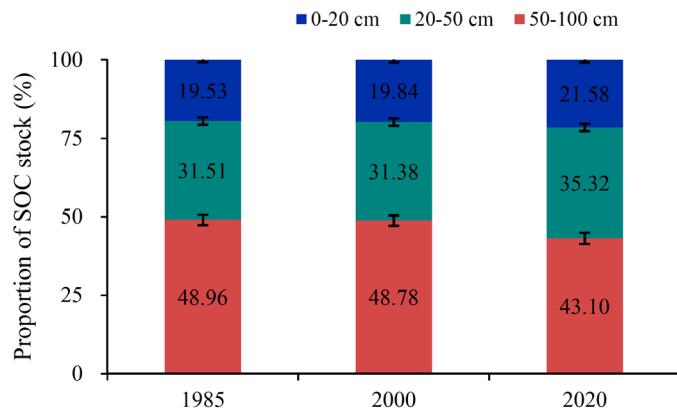

**Figure S4.** Spatial distribution of SOC content in each soil layer of Zoige wetland during 1985-2020.
