## Supplementary material 1

## TIDieR Items

* The focus of TIDieR is on reporting details of the intervention elements (and where relevant, comparison elements) of a study. Other elements and methodological features of studies are covered by other reporting statements and checklists and have not been duplicated as part of the TIDieR checklist. When a randomised trial is being reported, the TIDieR checklist should be used in conjunction with the CONSORT statement (see www.consort-statement.org) as an extension of Item 5 of the CONSORT 2010 Statement. When a clinical trialprotocol is being reported, the TIDieR checklist should be used in conjunction with the SPIRIT statement as an extension of Item 11 of the SPIRIT 2013 Statement (see www.spirit-statement.org). For alternate study designs, TIDieR can be used in conjunction with the appropriate checklist for that study design (see www.equatornetwork.org).

| BRIEF NAME |  |  |
| :---: | :---: | :---: |
| 1 | Provide the name or a phrase that describes the intervention. WHY | Nordic Walking intervention |
| 2 | Describe any rationale, theory, or goal of the elements essential to the intervention. | The Nordic walking (NW) is a technique advocate for the development of physical fitness and quality of life due to additional benefits. The biomechanical and physiological alterations in walking using poles gives support to our hypothesis that after NW will be difference between the axial coordination |
|  | WHAT <br> Materials: Describe any physical or informational materials used in the intervention, including those provided to participants or used in |  |
| 3 | intervention delivery or in training of intervention providers. Provide information on where the materials can be accessed (e.g. online appendix, URL). | Usual Nordic walking poles were used. |
| 4 | Procedures: Describe each of the procedures, activities, and/or processes used in the intervention, including any enabling or support activities. <br> WHO PROVIDED | The NW program consisted of 4 adaptation classes, 18 classes organized in different intensities and volume (table 1, 2). |
| 5 | For each category of intervention provider (e.g. psychologist, nursing assistant), describe their expertise, background and any specific training given. <br> HOW | Professionals of physical education taught classes two times per week, at Mondays and Wednesdays to one group training Nordic walking. |
| 6 | Describe the modes of delivery (e.g. face-to-face or by some other mechanism, such as internet or | The intervention is primarily provided by the primary investigator, a professional of Physical Education with 5 years of clinical experience, |

telephone) of the intervention and whether it was provided individually or in a group.

## WHERE

Describe the type(s) of location(s) where the intervention occurred, including any necessary infrastructure or relevant features.

WHEN and HOW MUCH

Describe the number of times the intervention was delivered and over what period of time including the number of sessions, their schedule, and their duration, intensity or dose.

## TAILORING

If the intervention was planned to be

Actual: If intervention adherence or fidelity was assessed, describe the extent to which the intervention was delivered as planned.
trained in providing the intervention throughout the development phase and in pilot testing of the intervention. Alternates designated to take over in case the primary investigator is unable to complete one or more intervention sessions will be professionals of Physical Education and Physiotherapists trained and approved by the primary investigator. Training was focus on uniform correction of exercise form, progression and regression of exercises and standard face-toface adherence reminders.

The NW class are provided at athletics track and gymnasium.

The volunteers trained in the period of 11 weeks, twice a week, totaling 22 sessions (4
familiarization and 18 training) at 9 a.m., the peak of the medication was respected. The sessions lasted 60 minutes. In the familiarization sessions the objective was the learning of the Nordic
Walking technique and the training were controlled by intensities (different speeds) and volume (session time) (Figure 1, 2, 3, 4, 5, 6; table 3)

For all intervention Phases the intensity and volume was individualized, respecting the principles of physical training (individuality, adaptation, progression, specificity, continuity).

No modifications happen in the intervention during the study period.

The subjects should have a minimum of $75 \%$ attendance in classes, or they could not be part of the evaluation group. All sample losses were described. To stimulate the frequency, warnings were made in all classes about the importance of the presence of the subjects, for the research. Moreover, the group stimulus and affective bonds proved to be effective in maintaining the group's frequency.

The exclusion criteria in case of frequency below $75 \%$ of the classes were maintained during the entire intervention

* We strongly recommend using this checklist in conjunction with the TIDieR guide (see BMJ 2014;348:g1687) which contains an explanation and elaboration for each item.

Table 1. Adaptation class descriptions

| Session | Objective | Nordic walking |
| :---: | :---: | :---: |
| S1 | Posture, strengthening of abdomen and balance (winch) + Correction of gait patterns: position of feet, knees and ankles flexion/extension (Squeeze the lemon / kneading grapes). | Posture + Dragging the sticks + <br> Correction of gait patterns: position of feet, knees and ankles flexion/extension (Squeeze the lemon / kneading grapes). |
| S2 | Dissociation of pelvic and scapular girdles (Gingado carioca, samba step) + Coordination of arms and legs (hiking in the forest). | S1 + Trunk rotation and arm swinging <br> + amplitude and arms and legs swinging, with altering limbs. |
| S3 | Range and motion and gait speed (Ayrton Senna) | S1+S2 + Pressure of sticks on the ground (load) $+\uparrow$ stride length + Open and closing hands on sticks |
| S4 | Complete technique of Nordic walking (fashion week parade) | Technique of Nordic walking walk in comfortable speed |

Table 2. Class periodization and BORG scale descriptions
