

Figure S1. Laguna Pastos Grandes sedimentary system, showing sampling sites (modern carbonates) used for isotope measurements.

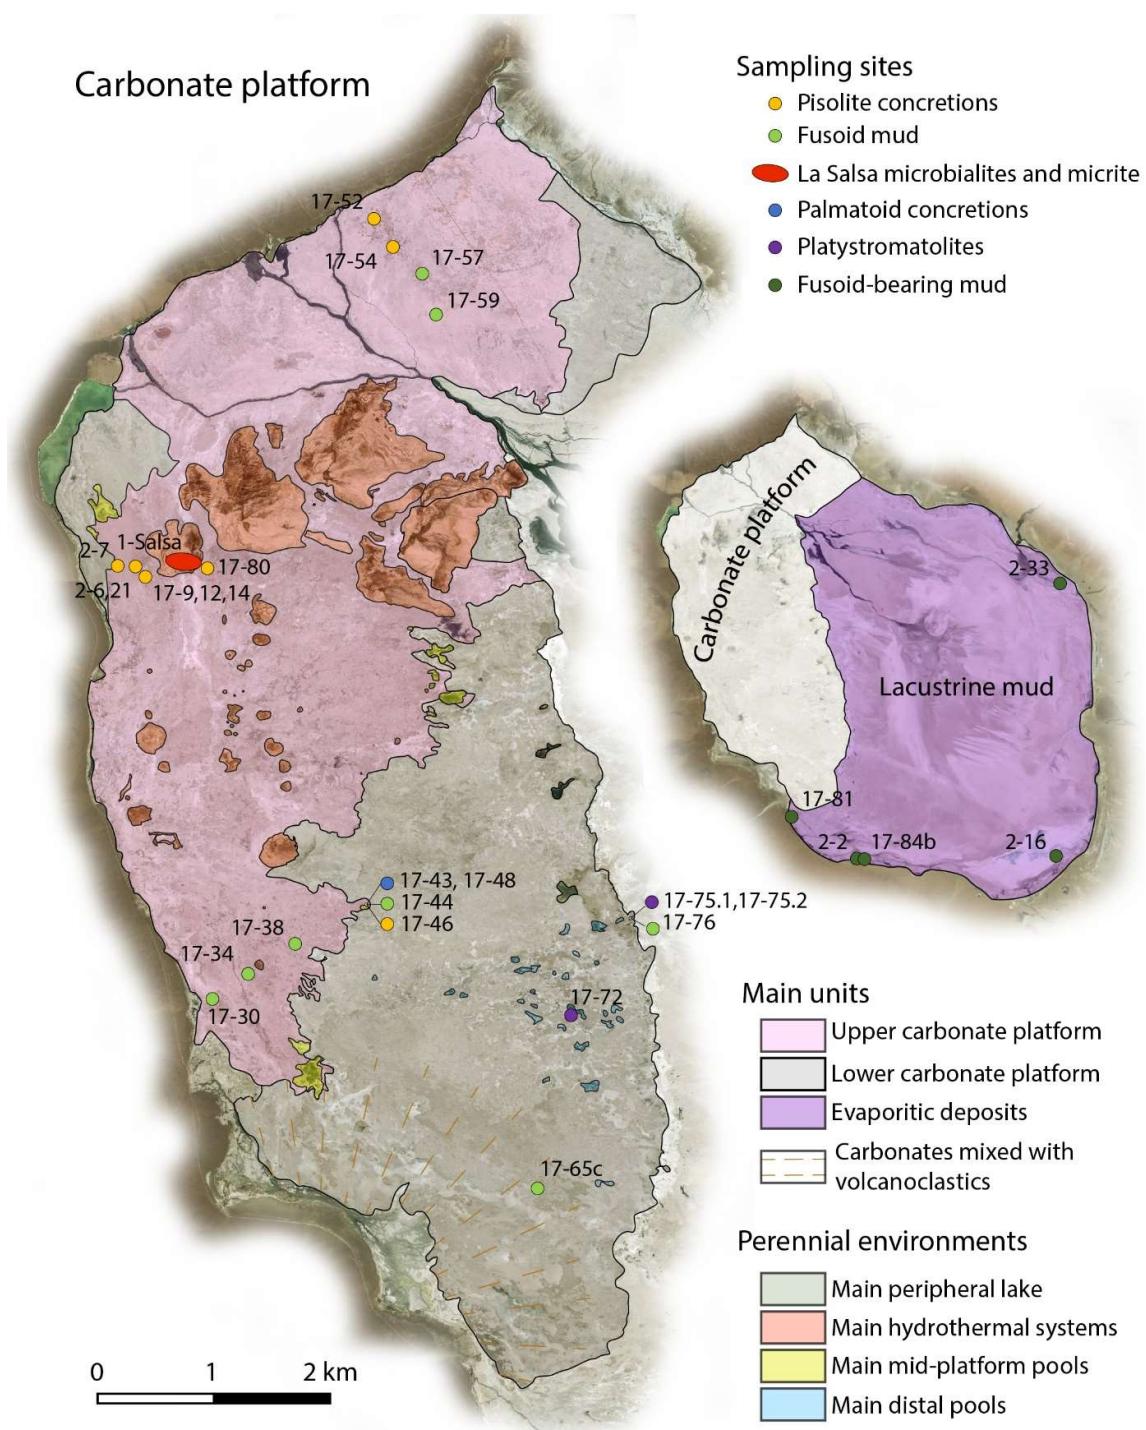

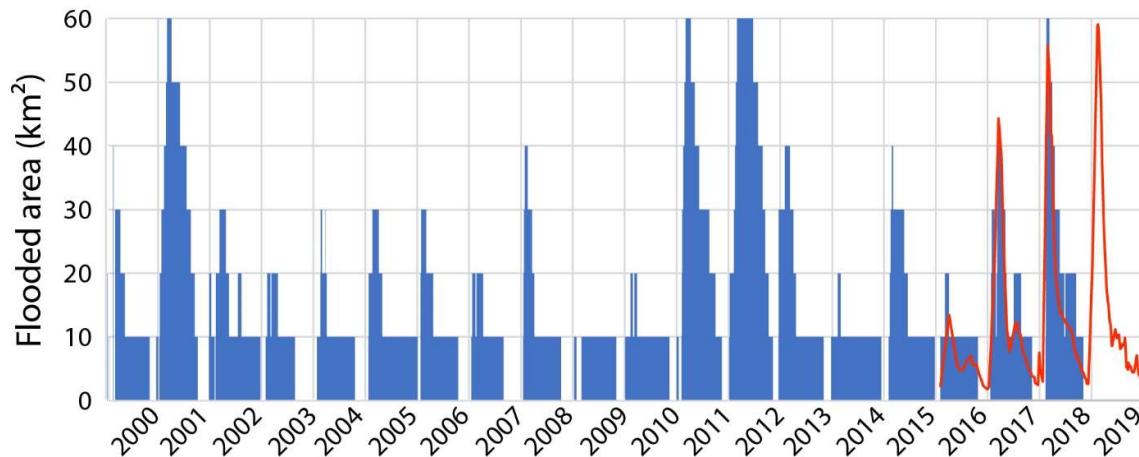

Table S1. Location of samples from the carbonate platform used for U-Th dating.

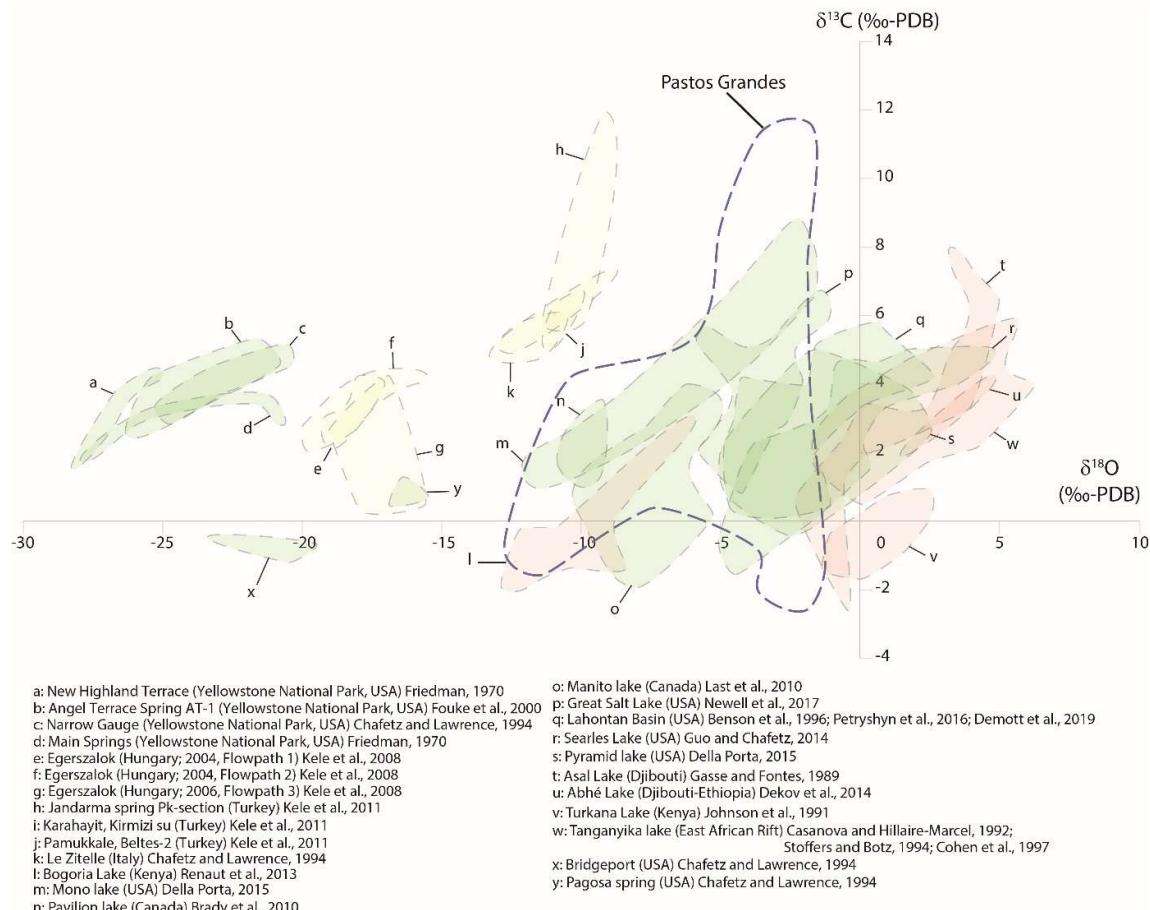

| Sample name | Sample type | Latitude (°N) | Longitude (°E) |
|-------------|---------------------|---------------|----------------|
| PG17-14 | Pisolite core | -21.62077 | -67.84990 |
| PG17-33 | Pisoidal rudstone | -21.65179 | -67.84143 |
| PG17-37 | Peloidal grainstone | -21.64967 | -67.83761 |
| PG17-63 | Peloidal grainstone | -21.67477 | -67.82306 |
| PG17-69 | Botryoidal cement | -21.66588 | -67.81560 |
| PG17-77 | Fusoid mud | -21.65364 | -67.80833 |

Figure S2. Lake level fluctuations from 2000 to 2019. In blue, estimated surface area of the lake, based on morphological variation, as seen in Aqua and Terra MODIS satellite views (2000-2019). In red, precise surface area of the lake, calculated from a dataset of post-2015 Sentinel-2 satellite images (<https://scihub.copernicus.eu>), using the Normalized Difference Water Index (NDWI; McFeeters, 1996), with the free Q-GIS software. The lake morphology thus calculated was then used to produce the estimated surface area by morphological analogy.
