

The Link Between Soil Geochemistry in South West England and Human Exposure to Soil Arsenic

Joanna Wragg, M. Cave, E. Hamilton, T.R.L. Lister

British Geological Survey, Keyworth, Nottingham NG12 5GG, UK

Supplementary Information

Example Relationship between an ISC and Its Geochemical Source

For example a high proportion of the S.Mg.Na ISC (Figure S1) is over the granite intrusions (cf. Figure 1 in the paper). It is made up of high concentrations of S and halides (Figure S2) and has a high Spearman correlation with loss on ignition at 450 °C values > 15% (0.70). This suggest that this ISC is derived from the high organic matter soils (peat) in the area [80] similar to a peat ISC found from a geochemical survey data in Ireland [81].

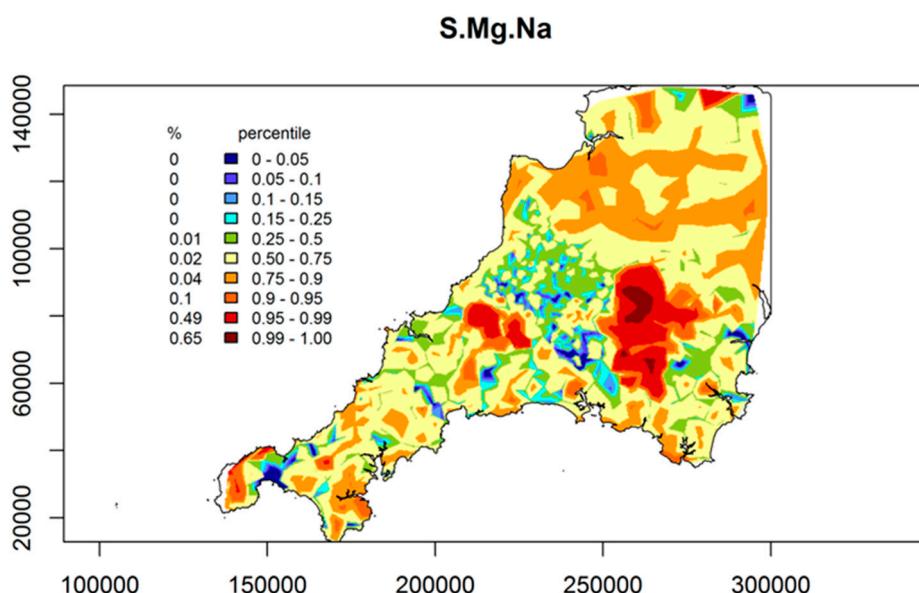

Figure S1. Interpolated Spatial distribution of the S.Mg.Na ISC.

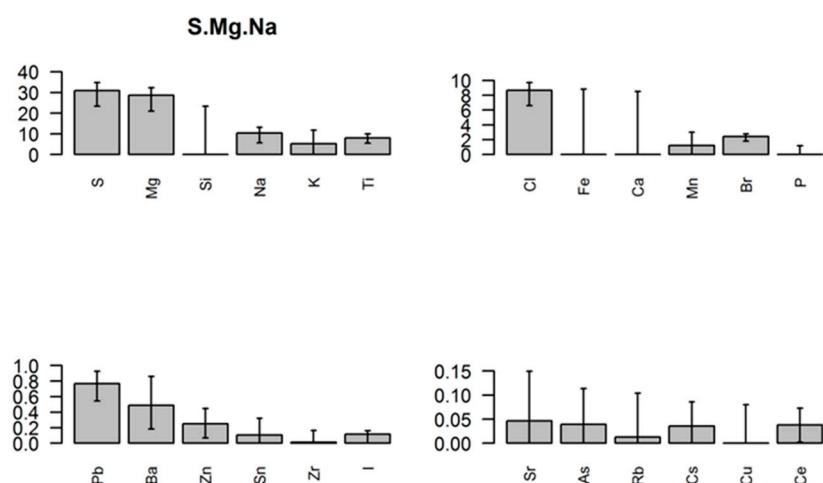

Figure S2. Chemical composition of the S.Mg.Na ISC (% units).

Composition of the ISCs

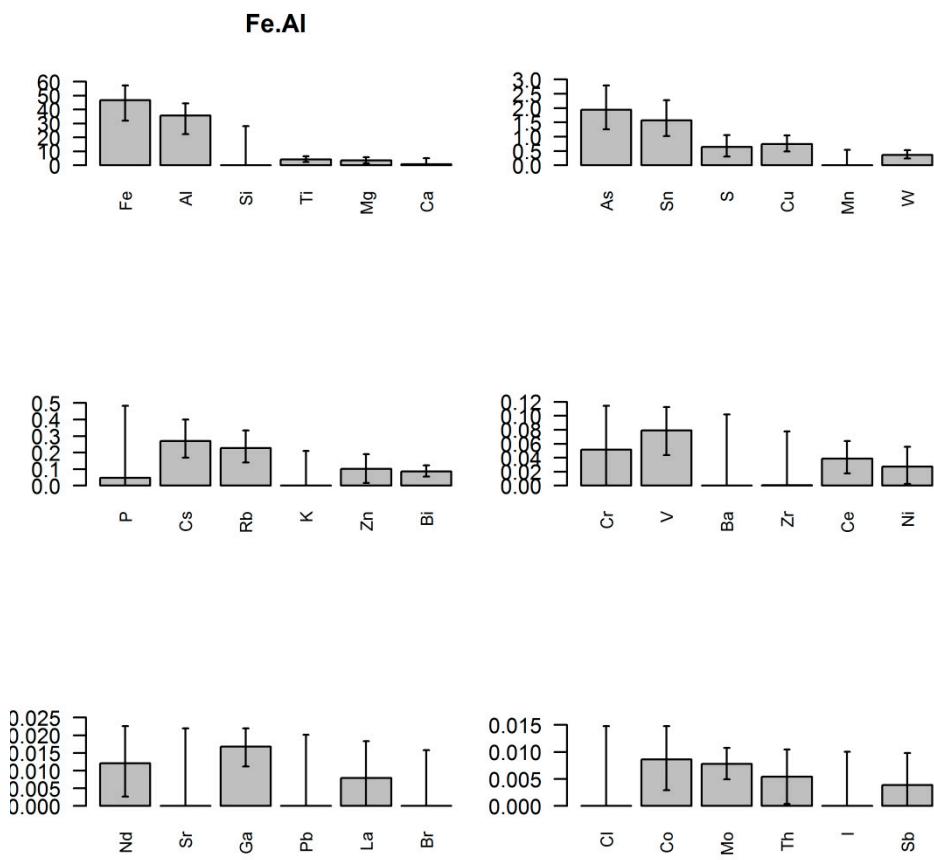

Figure S3. Composition of the Fe-Al ISC in units of %.

Al.K.Si.Fe

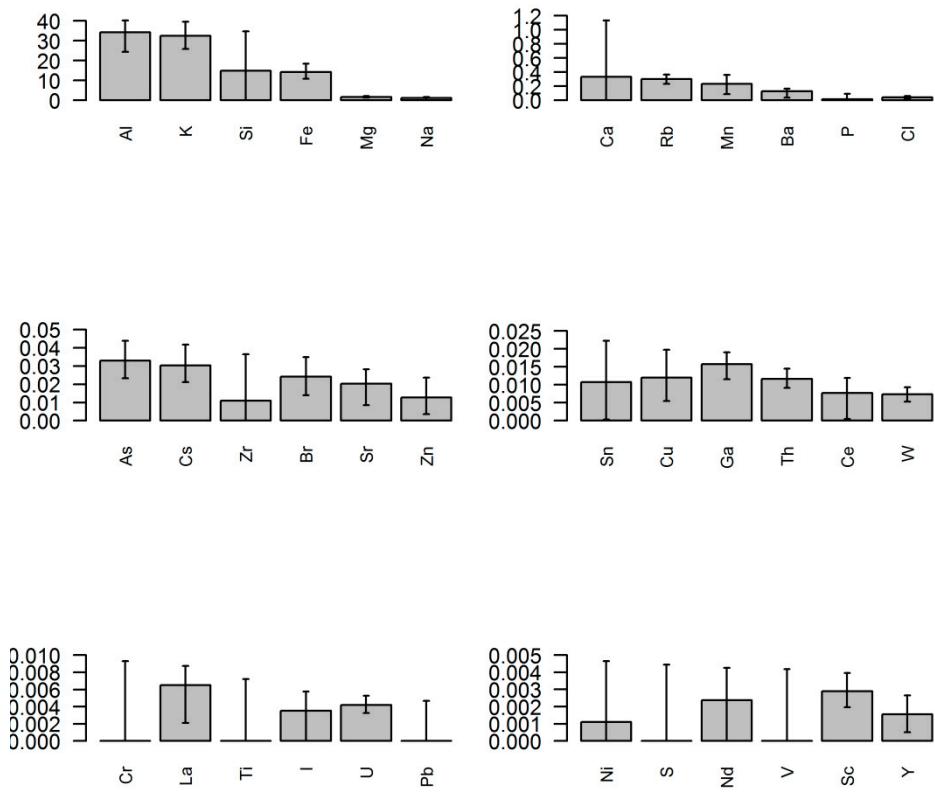

Figure S4. Composition of the Al.K.Si.Fe ISC in units of %.

Si.Fe.1

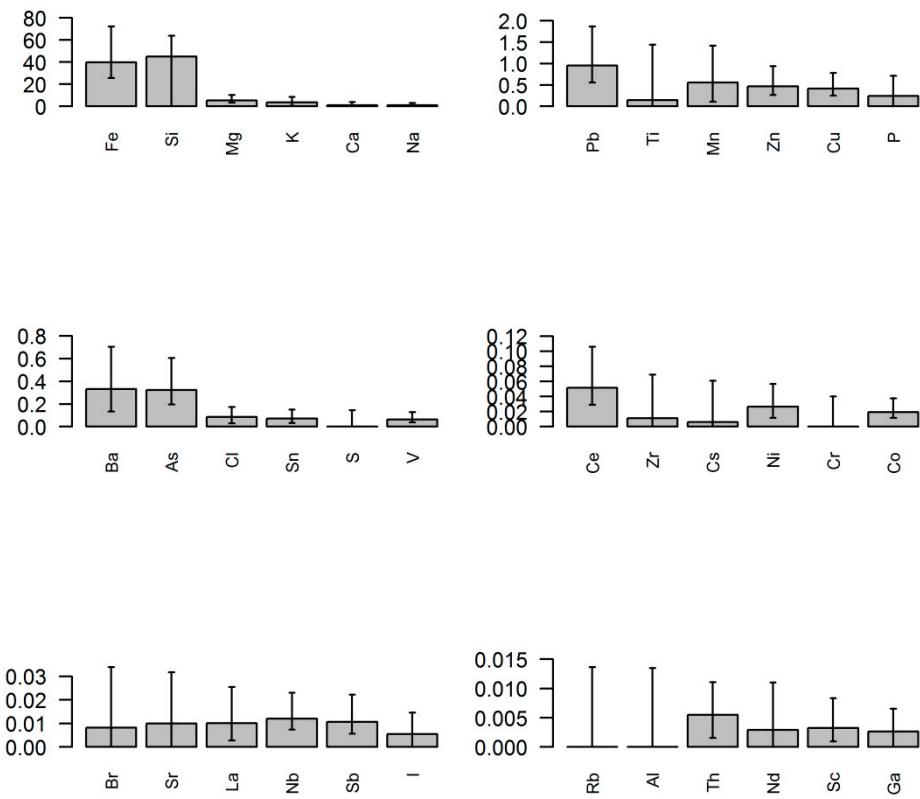

Figure S5. Composition of the Si.Fe.1 ISC in units of %.

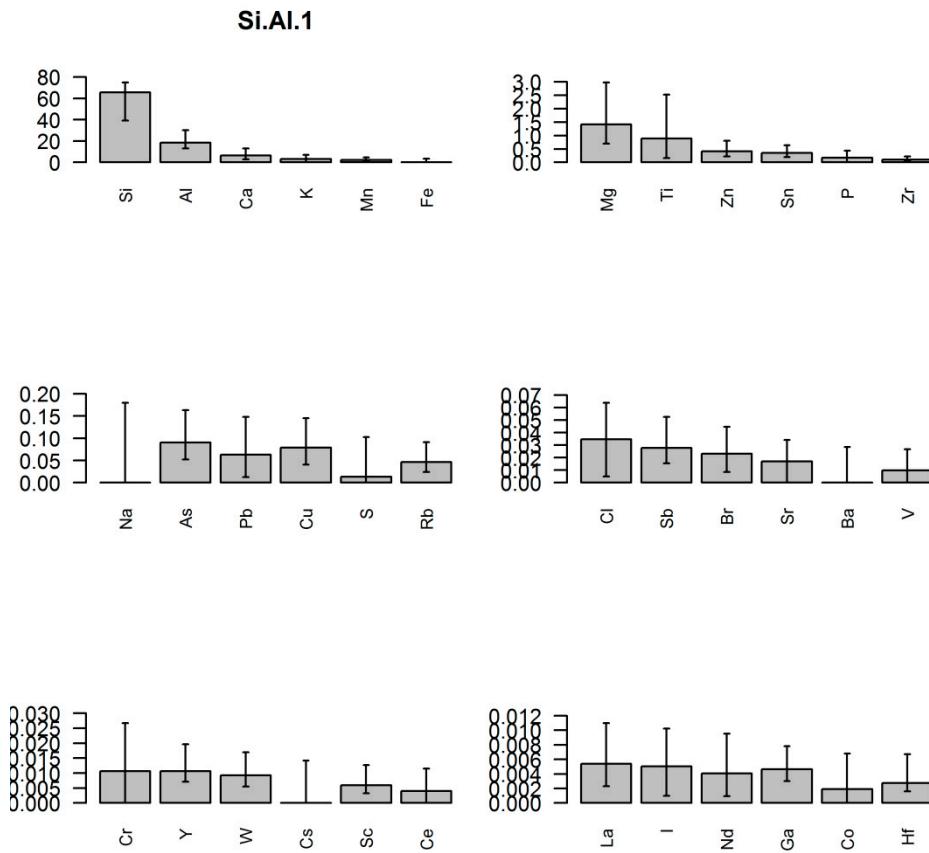

Figure S6. Composition of the Si.Al.1 ISC in units of %.

Soils XRF QA

Throughout the lifetime of the G-BASE project, strict quality control procedures have been in place at all stages from sample collection to analytical data reporting. Analytical data have been closely monitored to ensure continuity during numerous field campaigns and between different analytical methods. All data have been conditioned with respect to certified reference materials in order to provide both accurate and precise element concentrations with a high degree of confidence.

Four certified reference materials were analysed repeatedly throughout the batches of field samples. Analysis was carried out between April and June 2013. The CRMs analysed are as below.

GSD-7	Bulk stream sediment	National Research Centre for CRMs, China
GSS-1	Bulk soil	National Research Centre for CRMs, China
LKSD-1	Bulk lake sediment	CANMET, Canada
LKSD-4	Bulk lake sediment	CANMET, Canada

The results of the reference material analysis are given in Table S1 with the lower limits of detection given in Table S2

Table S1. results of the analysis of the XRFS reference materials.
