Supplementary Figure 1. Enhanced fluorescent signal intensity of procainamide labeled dextran ladder compared to 2-AB and 2-AA

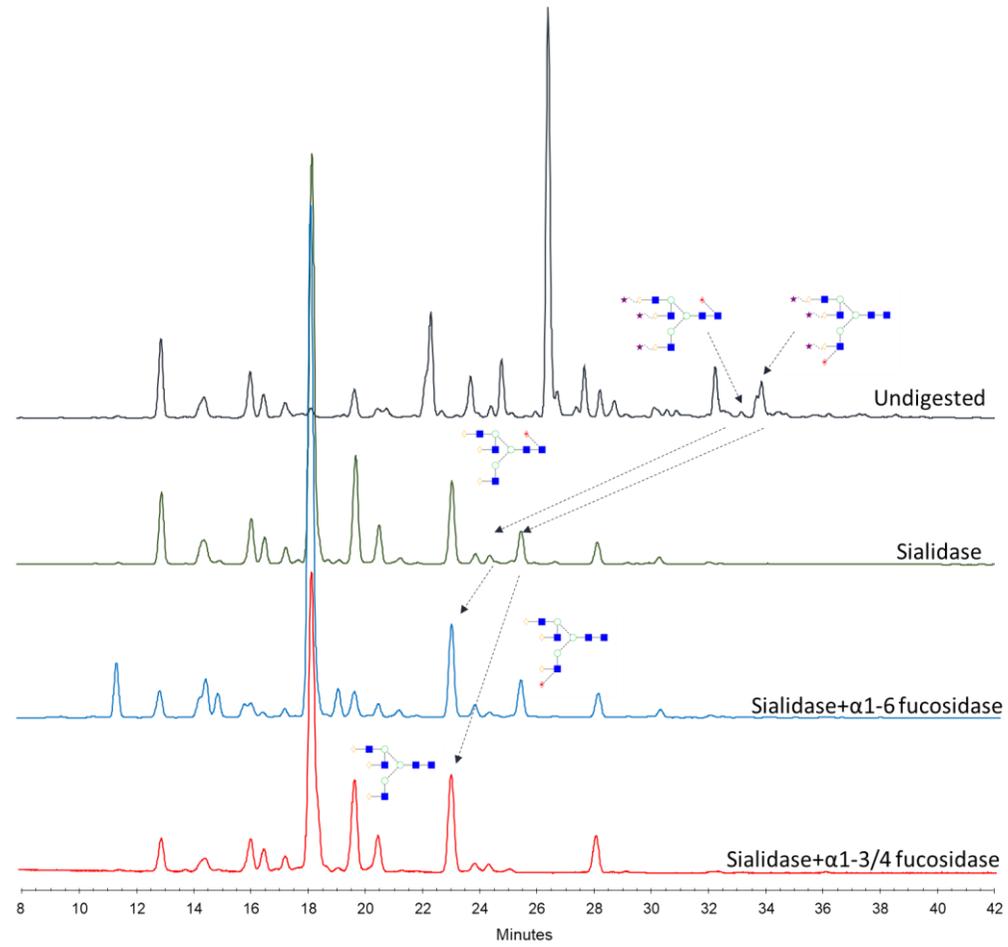

Supplementary Figure 2. Ionisation efficiency differences of procainamide, 2-AB and 2-AA labeled dextran ladders in positive MS mode

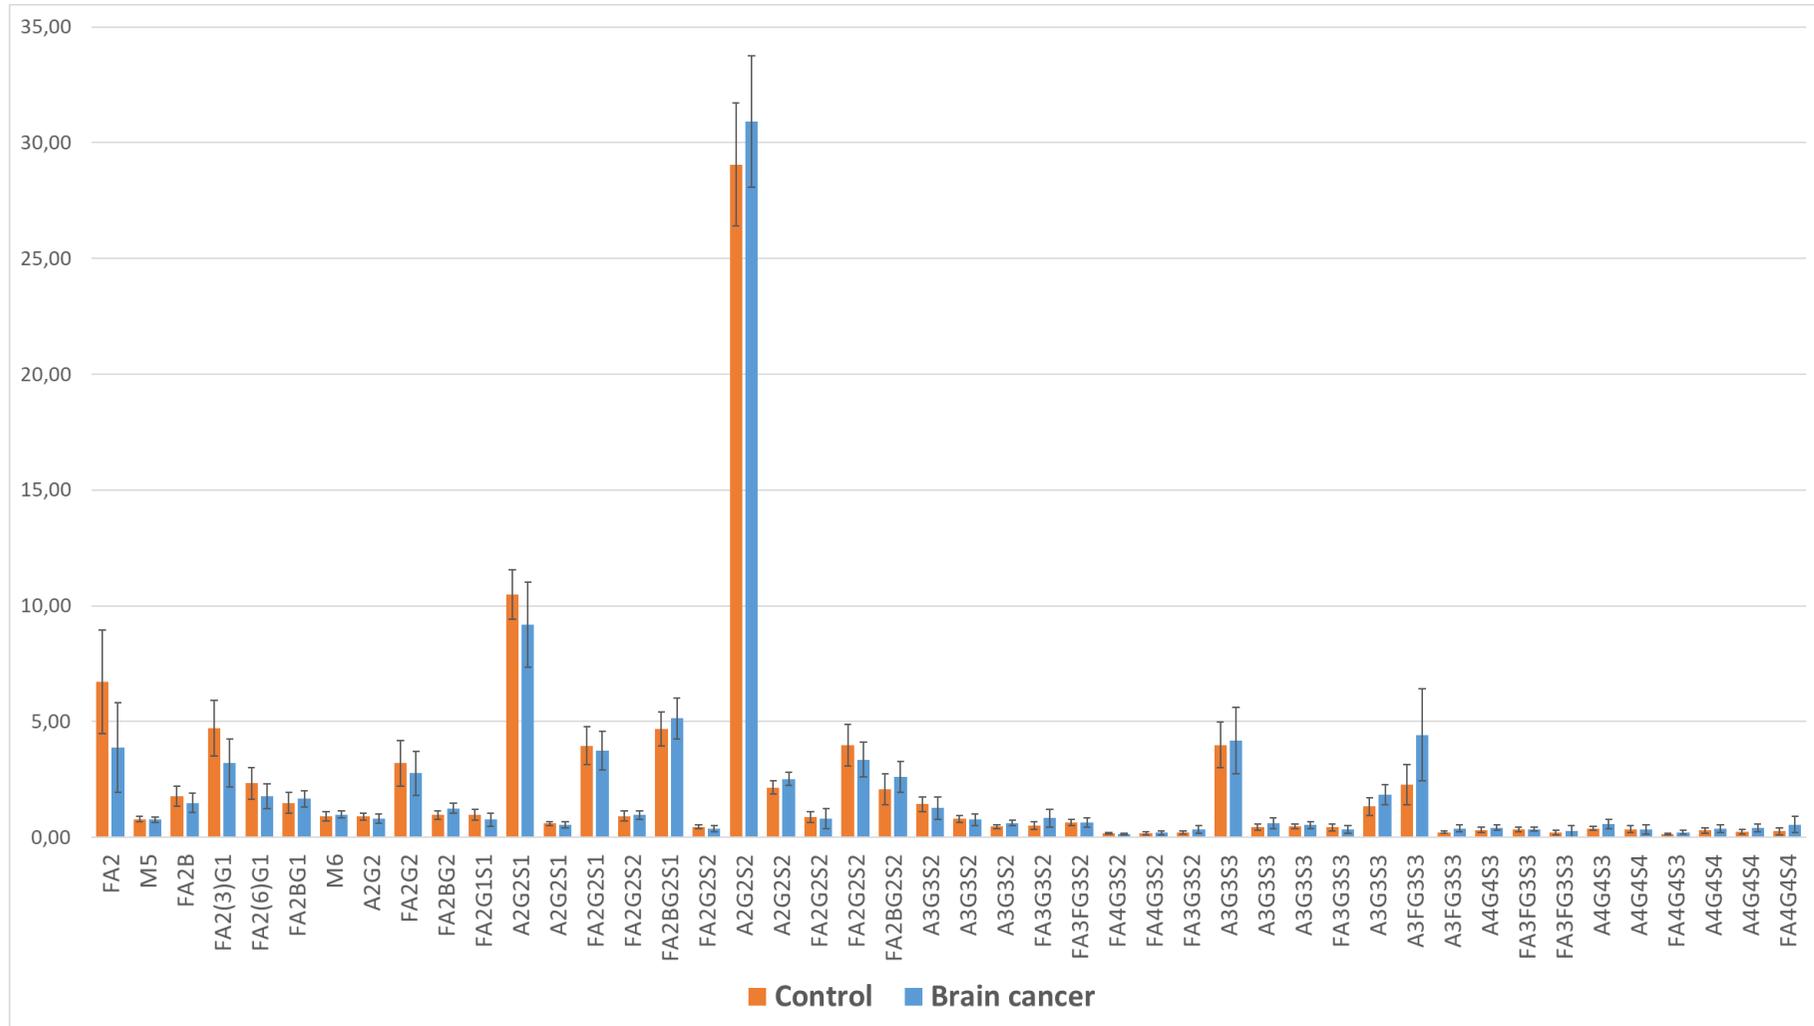

Supplementary Figure 3. Fluorescence and MS total ion chromatogram profile of sialidase digested serum N-glycome

Supplementary Figure 4: Linkage-specific fucosidase digestions of sialidase treated serum N-glycans to identify α 1-6 and α 1-3/4 linked fucose residues

Supplementary Figure 5: The main tendencies comparing healthy controls to the brain cancer patients were the higher level of bi-antennary neutral and lower level of highly sialylated structures

Supplementary Table 1: Quantified serum N-glycans in healthy controls and patients with different brain tumors (meningioma, glioblastoma, metastasis)

						Control		Meningeoma		Glioblastoma		Metastasis
