

Supplementary Materials of Epigenetic Characteristics of Human Subtelomeres Vary in Cells Utilizing the Alternative Lengthening of Telomeres (ALT) Pathway

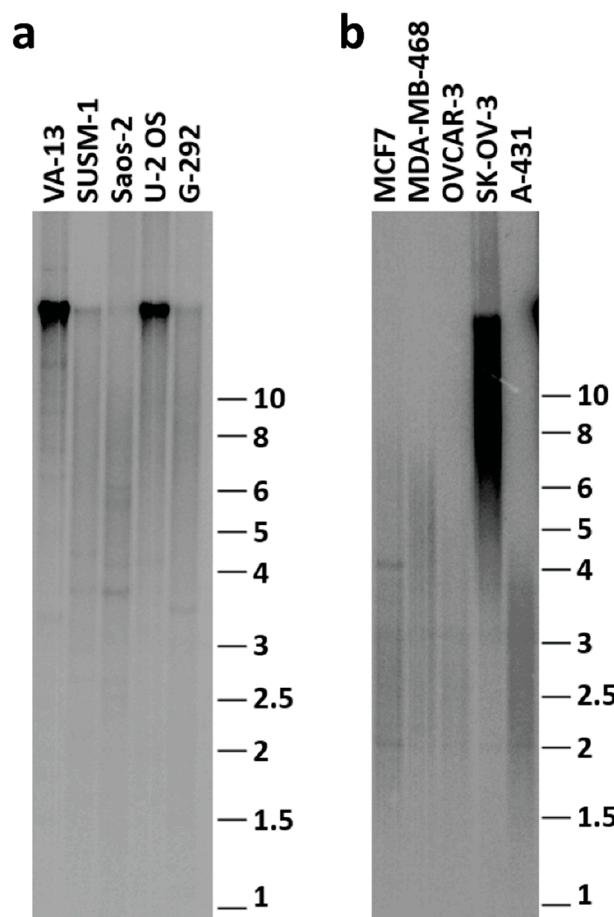

Figure S1. Telomere length analysis of ALT+ and ALT- cell lines. Terminal Restriction Fragment (TRF) analysis was performed on DNA extracted from (a) ALT+ cell lines, and (b) ALT- cell lines. Size markers in kilobases appear to the right.

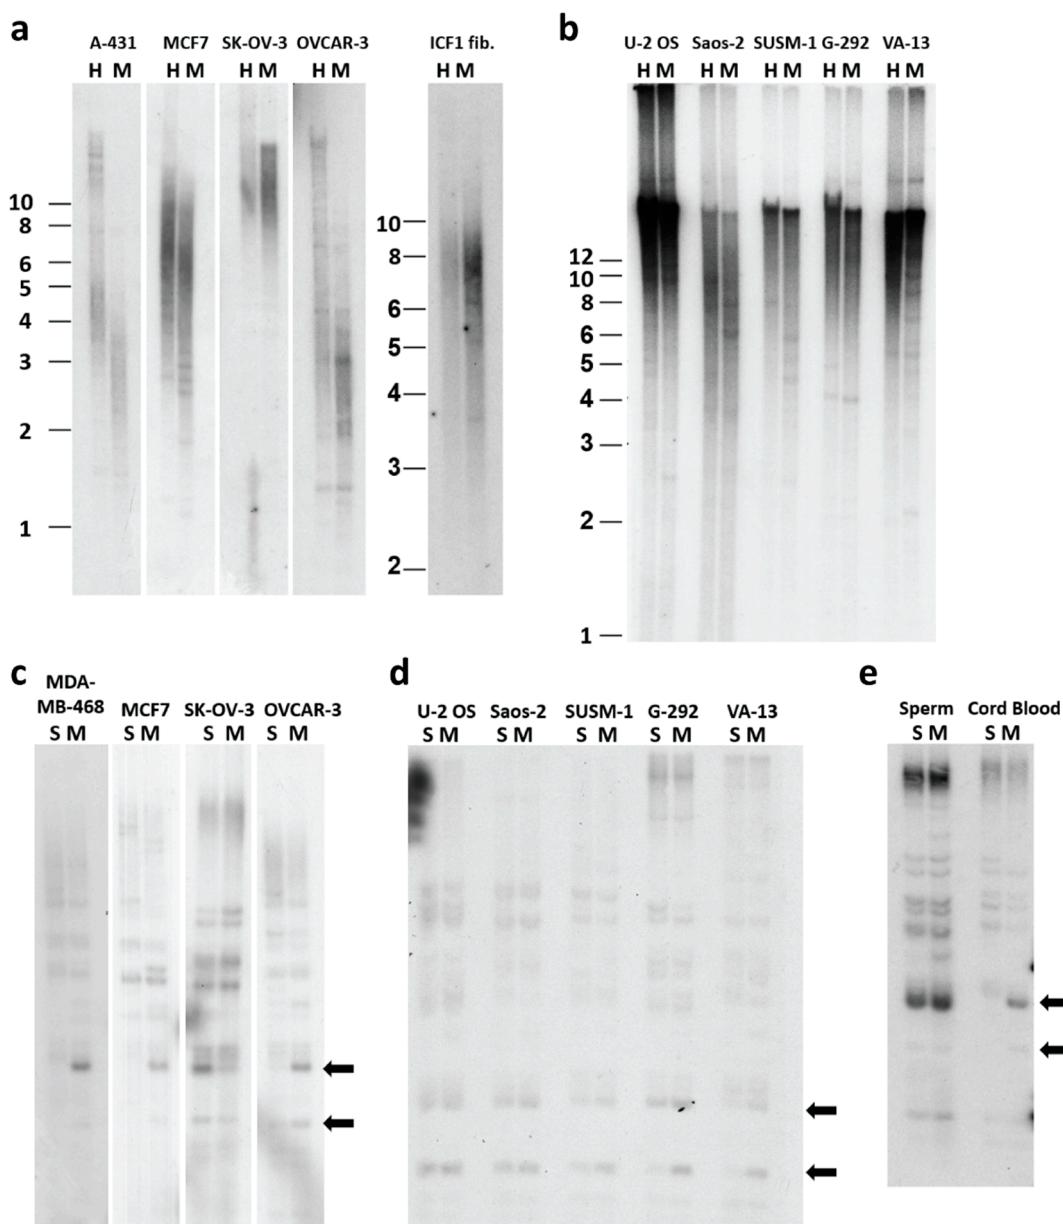

Figure S2. Subtelomeric methylation Southern analysis in ALT+ and ALT- cell lines. Terminal Restriction Fragment (TRF) analysis of (a) four ALT- cell lines and a control hypomethylated ICF1 LCL and (b) five ALT+ cell lines. Samples were digested with either *HpaII* (H) or *MspI* (M). Size markers in kilobases appear to the left. (c-e) Methylation analysis with the subtelomeric HuteL probe. Samples were digested with either *Sau3AI* (S) or *MboI* (M). Arrows point to hybridization bands that appear following the *Sau3AI* digestion only when the hybridized region is hypomethylated. (c) Analysis of four ALT- cell lines. (d) Analysis of five ALT+ cell lines. (e) Analysis of a hypomethylated DNA control (sperm DNA) and a methylated control (cord blood DNA).

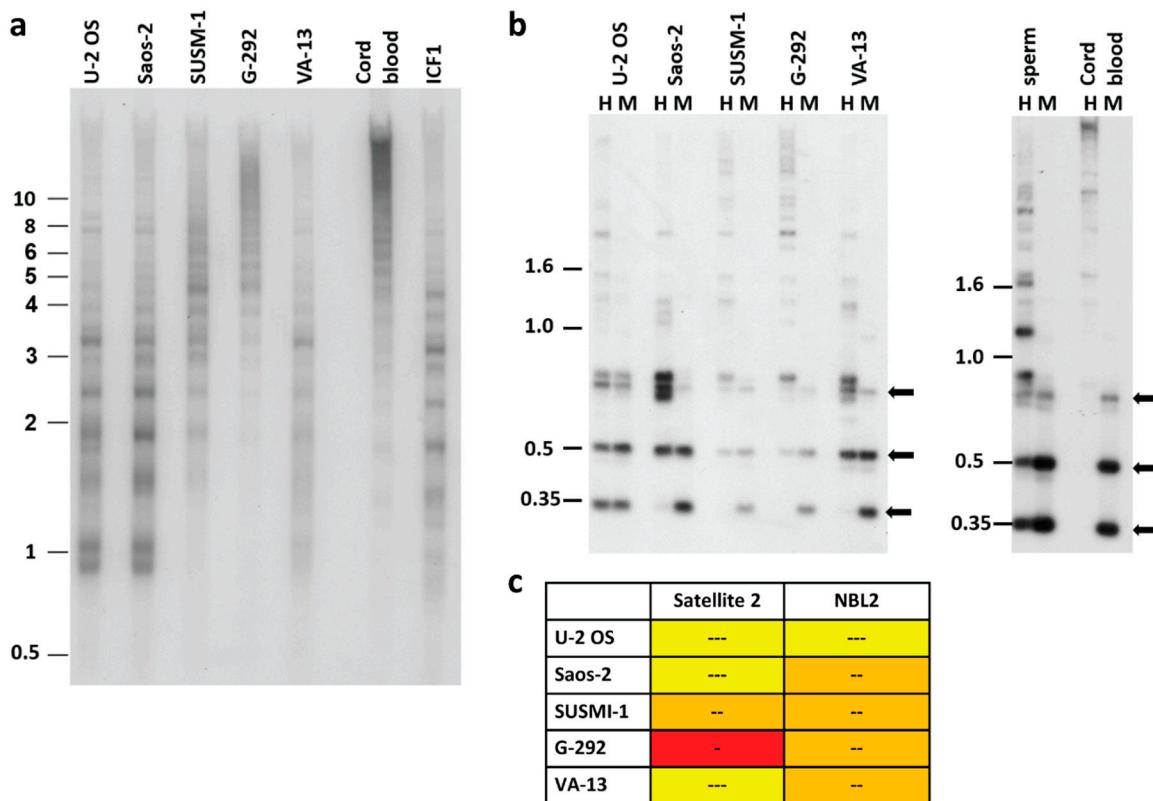

Figure S3. Southern analysis of DNA methylation of pericentromeric repeats in ALT+ cell lines. (a) Methylation analysis of satellite 2 repeats in five ALT+ cell lines. DNA samples were digested with the methylation sensitive *BstBI* restriction enzyme. Cord blood DNA served as a methylated control and ICF1 LCL DNA as a hypomethylated control. Size markers in kilobases appear to the left. (b) Methylation analysis of NBL1 repeats in five ALT+ cell lines. Cord blood DNA served as a methylated control and sperm DNA as a hypomethylated control. Samples were digested with either *HpaII* (H) or *MspI* (M). Arrows point to hybridization bands that appear following the *HpaII* digestion only when the hybridized region is hypomethylated. Size markers in kilobases appear to the left. (c) Comparison of the degree of hypomethylation at both pericentromeric repeats in the ALT+ cell lines. Yellow (---) – hypomethylated, orange (--) – partially hypomethylated, red (-) – methylated.

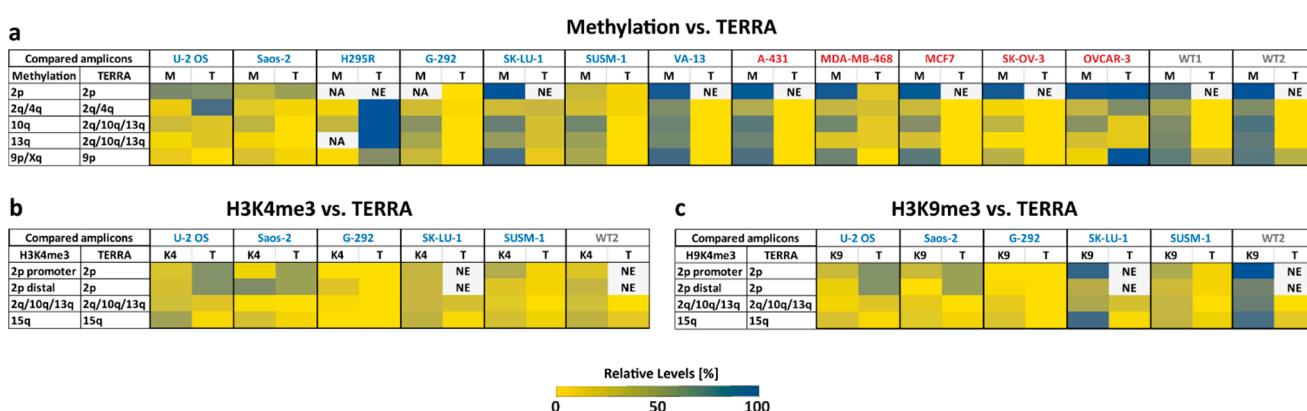

Figure S4. Association of TERRA expression with subtelomeric DNA methylation in ALT+ and ALT- cell lines and with histone modifications levels in ALT+ cell lines. Comparison of TERRA levels with DNA methylation levels (a) and histone H3K4 and H3K9 trimethylation levels (b and c, respectively) at different subtelomeres within each sample. Mean values on the scale of 0–100% were calculated for each of the studied characteristics, for several subtelomeres in each sample. For DNA methylation we calculated the mean percentage of all the CpGs within each amplicon while using the values that were obtained through targeted bisulfite sequencing. For TERRA levels, each subtelomere was adjusted separately since expression levels cannot be compared between different amplicons. The highest value obtained for each subtelomere was set to 100%, and the values of the remaining samples for the same subtelomere were normalized between 0–100% while maintaining the original ratio of expression values between the samples. For histone modifications levels, relative

enrichment values for all subtelomeres within a sample were obtained by calculating the fold increase above the background of the negative control. To obtain mean values on the scale of 0–100% we set the highest value among all the subtelomeres of all samples to 100% for each of the modifications separately, and normalized the remaining values appropriately, while preserving the original ratios between the samples. The colors in the heatmaps depict the adjusted mean values based on the color scale below the maps. NA—Not Available (primers do not amplify the region in the specific sample). NE—Not Expressed. M—DNA methylation, T—TERRA, K4—H3K4 trimethylation, K9—H3K9 trimethylation. ALT+ samples appear in blue, ALT- samples appear in red.

Table S1. Primer sequences for RT-qPCR of *DNMT3B* and *TET* protein family.

Primer	Sequence
DNMT3B-all isoforms-For	5'-CTGTCAGCCAGCACTTTAATTG-3'
DNMT3B-all isoforms-Rev	5'-CACCTAGCTTCTCCAGAGCAT-3'
DNMT3B-catalytic isoforms-For	5'-GAACAGGCCGTGATAGCAT-3'
DNMT3B-catalytic isoforms-Rev	5'-TGTACTTTCTTAACGGCTATCCTATTG-3'
TET1-For	5'-GCTGCTGTCAGGGAAATCAT-3'
TET1-Rev	5'-ACCATCACAGCAGTGGACA-3'
TET2-For	5'-CCAATAGGACAATGATCCAGG-3'
TET2-Rev	5'-TCTGGATGAGCTCTCAGG-3'
TET3-For	5'-TCGGAGACACCCTCTACCAG-3'
TET3-Rev	5'-TCGGAGACACCCTCTACCAG-3'
HPRT-For	5'-CTGAGGATTGGAAAGGGTGT-3'
HPRT-Rev	5'-AAAGAATTATAGCCCCCTTGAG-3'

Table S2. Primer sequences for ChIP and TERRA RT-qPCR analyses.

Primer	Sequence	Used for
Subtelomere 2p promoter-For	5'-GTGGAACCTCAATAATCCGAAAA-3'	ChIP
Subtelomere 2p promoter-Rev	5'-GGACACCACTGTAAGCAAGATAGC-3'	
Subtelomere 5p promoter-For	5'-TGGCACAGCATCGTAGACAAG-3'	ChIP
Subtelomere 5p promoter-Rev	5'-TCCAACCTCAGCAATCTGAAAAA-3'	
Subtelomere 10q/13q/19q promoter-For	5'-GGCGCTGGACACCACTGTA-3'	ChIP
Subtelomere 10q/13q/19q promoter-Rev	5'-TGAGTAATCTGAAAAGCCGTT-3'	
Subtelomere 7q-For	5'-TTCAGACGGGCTTTGGTT-3'	ChIP
Subtelomere 7q-Rev	5'-ATGGTGAATACAATCCTTCTGTTG-3'	
Subtelomere 2p-For	5'-CCGATCGACGGTGAATAAAA-3'	ChIP and RT-qPCR
Subtelomere 2p-Rev	5'-GCCTAACCTCGTGTGACTTGTGAG-3'	
Subtelomere 5p-For	5'-GAGTGCATTAGCATACAGGT-3'	ChIP and RT-qPCR
Subtelomere 5p-Rev	5'-TCCTAATGCACACGTAACAC-3'	
Subtelomere 2q/10q/13q-For	5'-AACCTGAACCCCTAACCTCC-3'	ChIP and RT-qPCR
Subtelomere 2q/10q/13q-Rev	5'-ATTGCAGGGTTCAAGTGCAG-3'	
Subtelomere 15q-For	5'-AACCTAACACATGAGCAACG-3'	ChIP and RT-qPCR
Subtelomere 15q-Rev	5'-CTCGCCTAGCTTGGGAG-3'	
Subtelomere 11q-For	5'-CTGATTATTCAAGGGCTGAAA-3'	RT-qPCR
Subtelomere 11q-Rev	5'-GCCGCATCGACGGTGAATAA-3'	
Subtelomere 9p-For	5'-GGGCGCATTAAACGGTGAATA-3'	RT-qPCR
Subtelomere 9p-Rev	5'-CCGCACTGAACCGCTAAC-3'	
Subtelomere 2q/4q-For	5'-GGTGAATAAAATCTTCTGTTGC-3'	RT-qPCR
Subtelomere 2q/4q-Rev	5'-TTTCGTTTCCCGCTTCC-3'	
Subtelomere 16p-For	5'-AACGGTCAGTGTGAAAATGG-3'	RT-qPCR
Subtelomere 16p-Rev	5'-CAACTGGACCCCTGCAATGC-3'	
Subtelomere 10p/18p-For	5'-CCTTCTAACCTGGACTCTGAC-3'	RT-qPCR
Subtelomere 10p/18p-Rev	5'-GCCACAGCGACGGTAATAA-3'	
β-actin-For	5'-TGTACGCCAACACAGTGTG-3'	RT-qPCR
β-actin-Rev	5'-GCTGGAAGGTGGACAGCGA-3'	
Hoxa 7 TSS-For	5'-TACTCACCTCCCCTTCCCA-3'	ChIP

ALT+ samples are marked in blue; ALT- samples are marked in red. The values in the cells represent the P value of the two compared samples. Significant values ($P < 0.05$) are marked in yellow.

Table S5. P values of a two-tailed Welch's *t*-test comparing TERRA expression levels in ALT+ and ALT- samples.

ALT+ samples are marked in blue; ALT- samples are marked in red. The values in the cells represent the P value of the two compared samples. Significant values ($P < 0.05$) are marked in yellow.

Table S6. P values of a two-tailed Mann–Whitney U-test comparing H3K9me3 levels in ALT+ samples and FSE WT cells.
