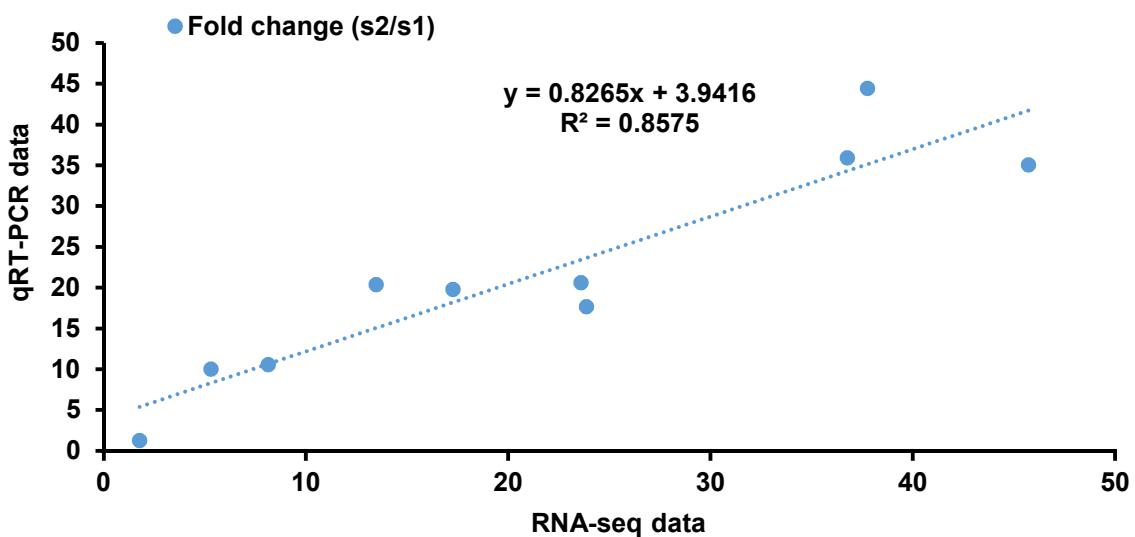

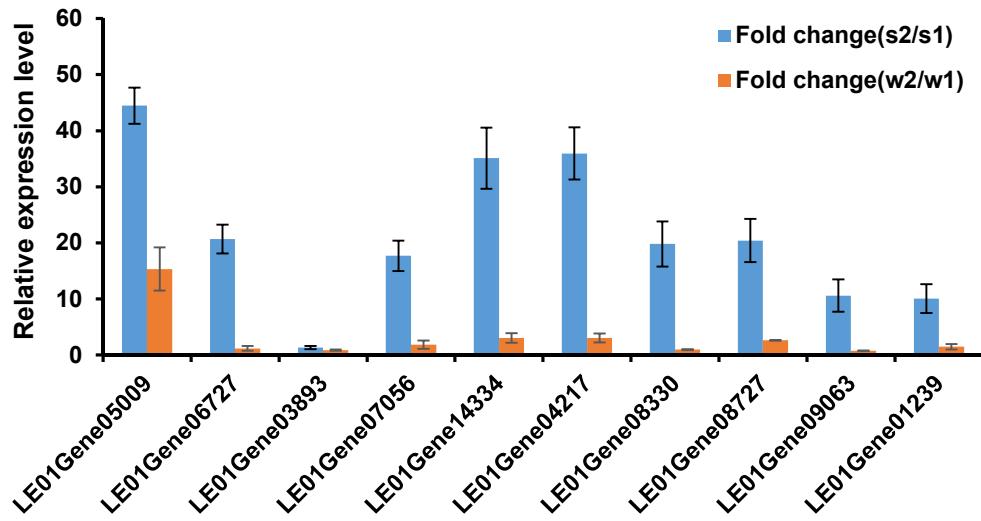

Figure S1. qRT-PCR results of ten selected genes and correlation between transcriptome data and real time PCR results. The resistant and susceptible *L. edodes* mycelia samples (s2, w2) were harvested after the *T. atrovire* strain 92-1 had contact with the *L. edodes* strains of 24 hours, respectively. As control, the Y3334 strain and Y55 strain of *L. edodes* was confronted with itself, respectively. The mycelia samples of resistant and susceptible *L. edodes* (s1, w1) were harvested after contact for 24 hours, respectively. s1 represents Y3334 vs. Y3334; s2 represents Y3334 vs. *T. atrovire* strain 92-1; w1 represents Y55 vs. Y55; w2 represents Y55 vs. *T. atrovire* strain 92-1.

Figure S2. Alignment of the amino acid sequences of *LeTLP1* (Y3334), *LeTLP* (Y55), and *L. edodes* TLP(GenBank: AB244759). Dashes in the sequence represent the introduction of a single amino acid gap. Conserved Cys are indicated with an asterisk, and conserved acidic amino acids in the acidic cleft are indicated with a +.

Table S1 Cultivated and wild strains of *Lentinula edodes* used in this study.

Strain number	Strain name	Origin	Main agronomic traits
c2	S605	Shanghai	S,F,M and MLa
c6	Cr04	Sanming-1	S, F, MH and Ea
c9	L12	Sanming	W, D, ML
