Table S1. Mean and standard deviation (SD) of proton density fat fraction (PDFF), analyzed texture features, and measured MVIC, separately for knee extensors (quadriceps) (EXT) and knee flexors (ischiocrural muscles) (FLEX) and grouped by sex (male, $n = 15$; female, $n = 15$). Significant differences ($p < 0.05$) between males and females are marked in bold.

Parameter	Male		Female		<i>p</i>
	Mean	SD	Mean	SD
