

Figure S8: Phenotypes associated with different exon 44 skip equivalent and amenable to exon 44 skipping mutations. **(A)** Distribution of phenotypes for each exon-44 skip equivalent deletion subset. Individual patients are grouped depending on the pattern of deletion and their phenotypes are represented by colored squares. **(B)** Phenotypic comparison of deletional patterns between in-frame skip-equivalent deletions and patients eligible for exon 44 skipping with out-of-frame deletions (UMD-DMD France database).
