Supplementary Table 2. Clinical characteristics of a T-ALL patient whose blast cells were employed to establish PDX model.

Disease Characteristics	Specific information
Phenotype	T-ALL
Gender	Male
Age (years)	31
WBC	289.44*10 ⁹ /L
HGB	129 g/L
PLT	11*10 ⁹ /L
LDH	2091 U/L
Percentage of blast cells in bone marrow	92.5%
Percentage of blast cells in peripheral blood	92%
Karyotype	TCRB, TCRG, TCRD rearrangement positive
Genetic alterations	NOTCH1 nonsense mutation, PTEN frameshift mutation
Xenograft engraftment method	Tail vein injection
