

Figure S1. **a:** Cost of post proposed model using multiomics data and all subtypes. **b:** Accuracy of proposed mode using multiomics data and all subtypes. **c:** Accuracy of the proposed model Lum A vs Her2+ classification. **d:** Accuracy of the proposed model Lum A vs Basal-Like classification. **e** S1 **e:** Accuracy of the proposed model Lum A vs Lum B Classification. Both worst and best performances are depicted with cross validation.

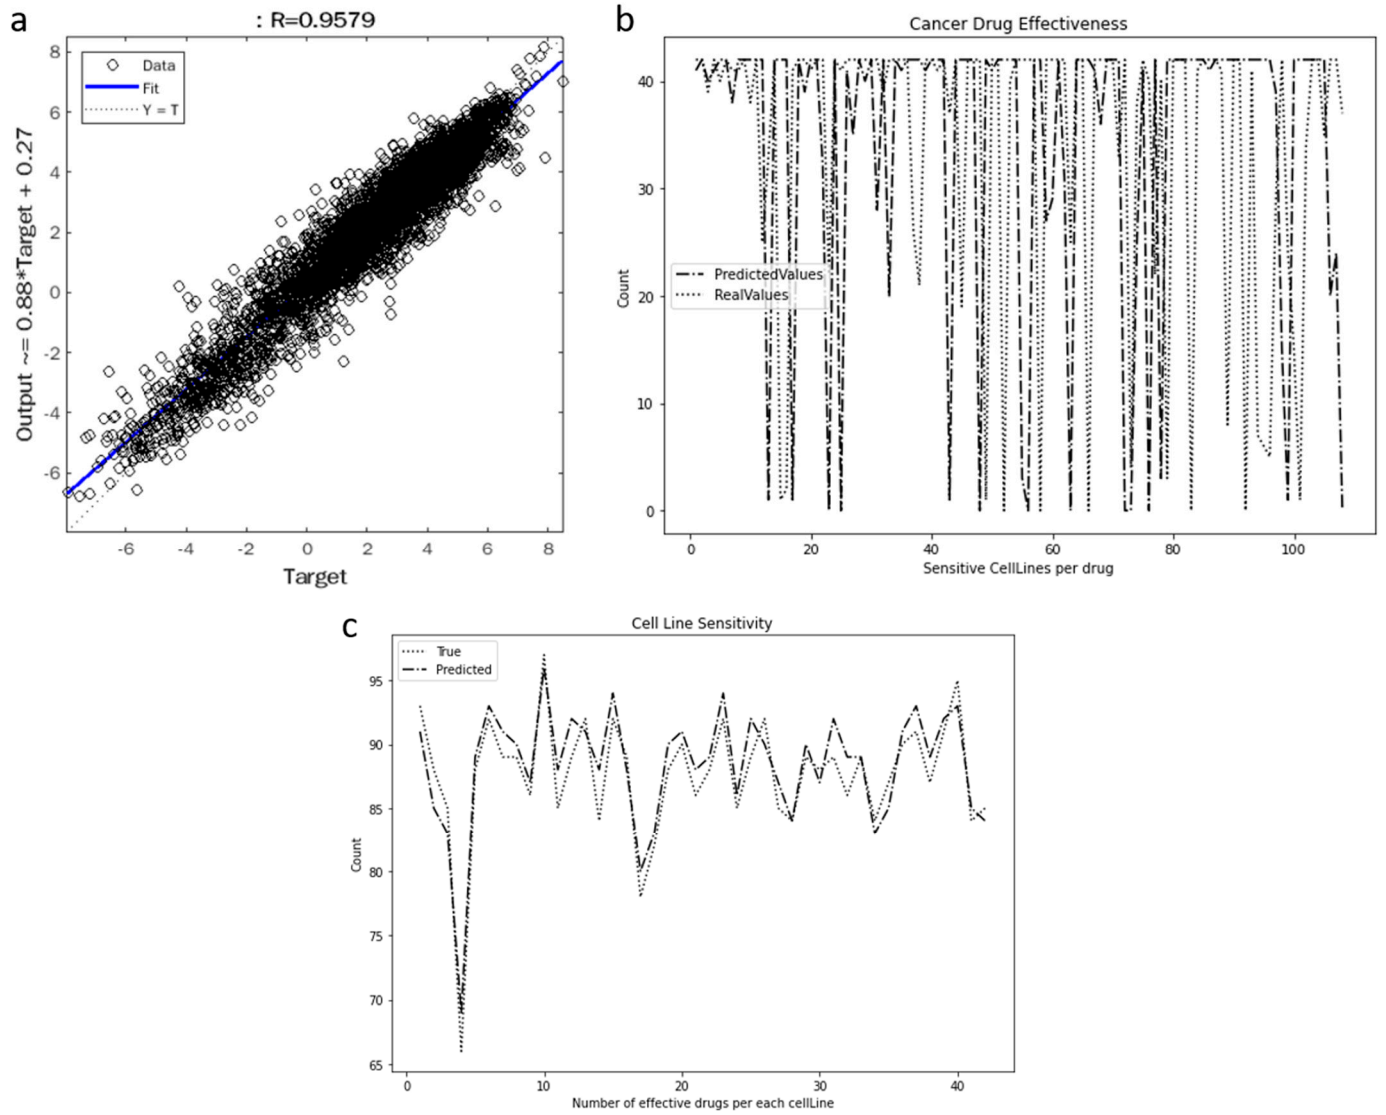

Figure S2. **a:** Regression values of all drugs combined. **b:** Effectiveness all drugs across all cell lines. **c:** Sensitivity of all cell-lines across all drugs.

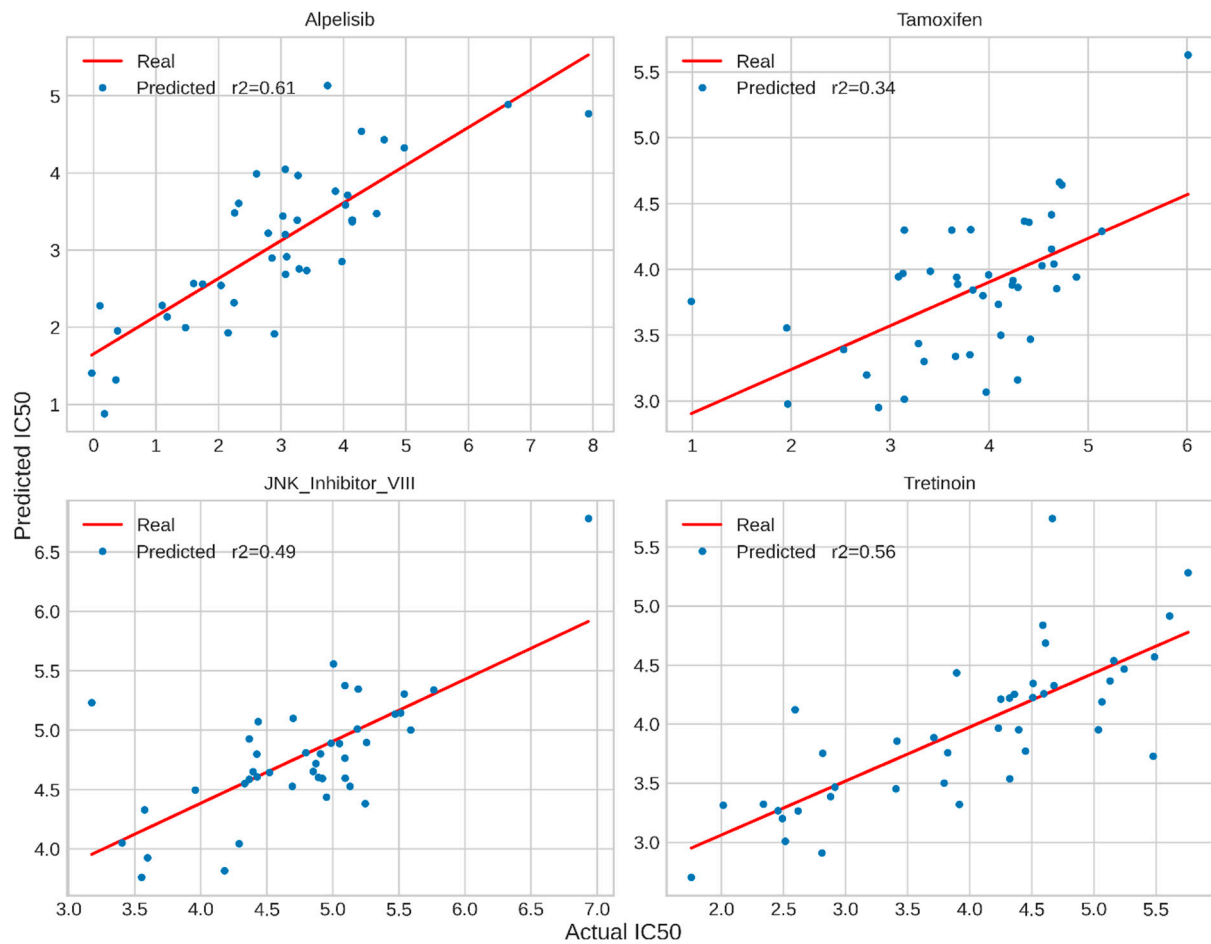

Figure S3. The subplots represent the r^2_{squared} error of the four cancer drugs. The low r^2_{squared} value of each drug is mainly due to outliers.

Figure S4. Sensitivity of different subtypes to Dabrafenib.

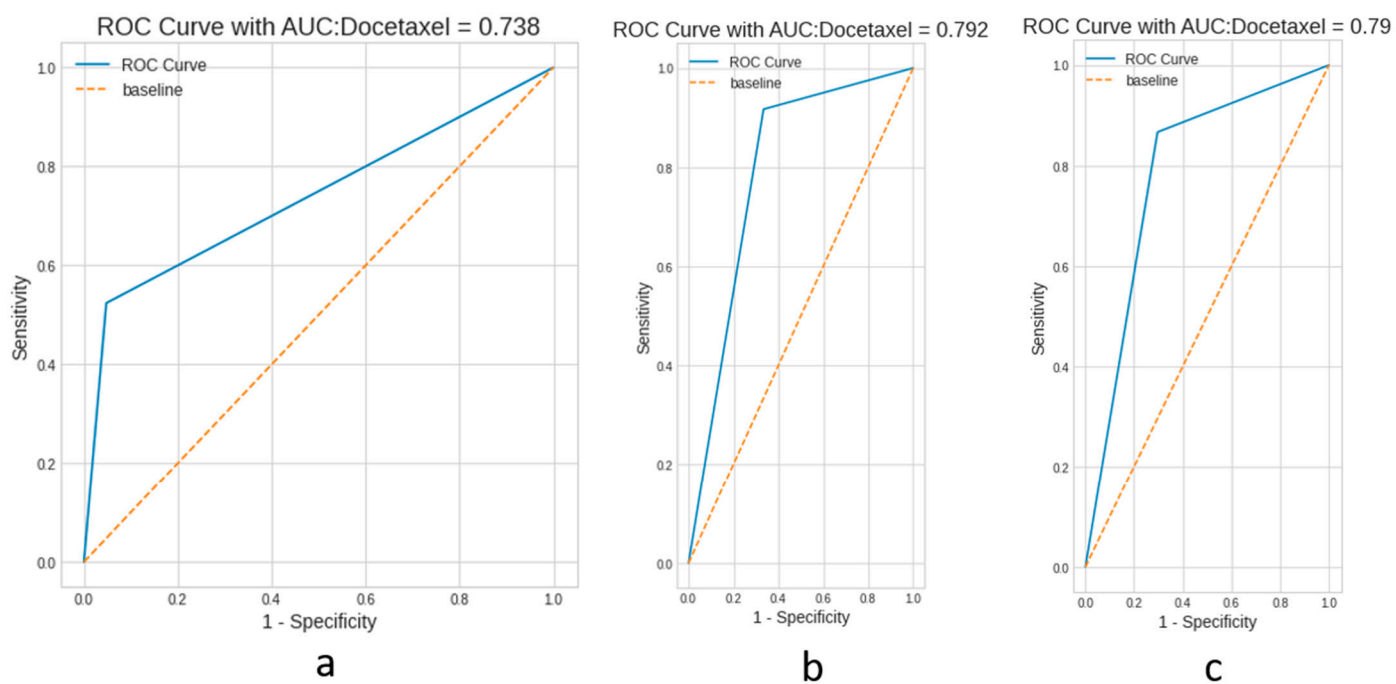

Figure S5. AUC for Docetaxel. **a:** SVM. **b:** Random Forest. **c:** DCNN-DR.

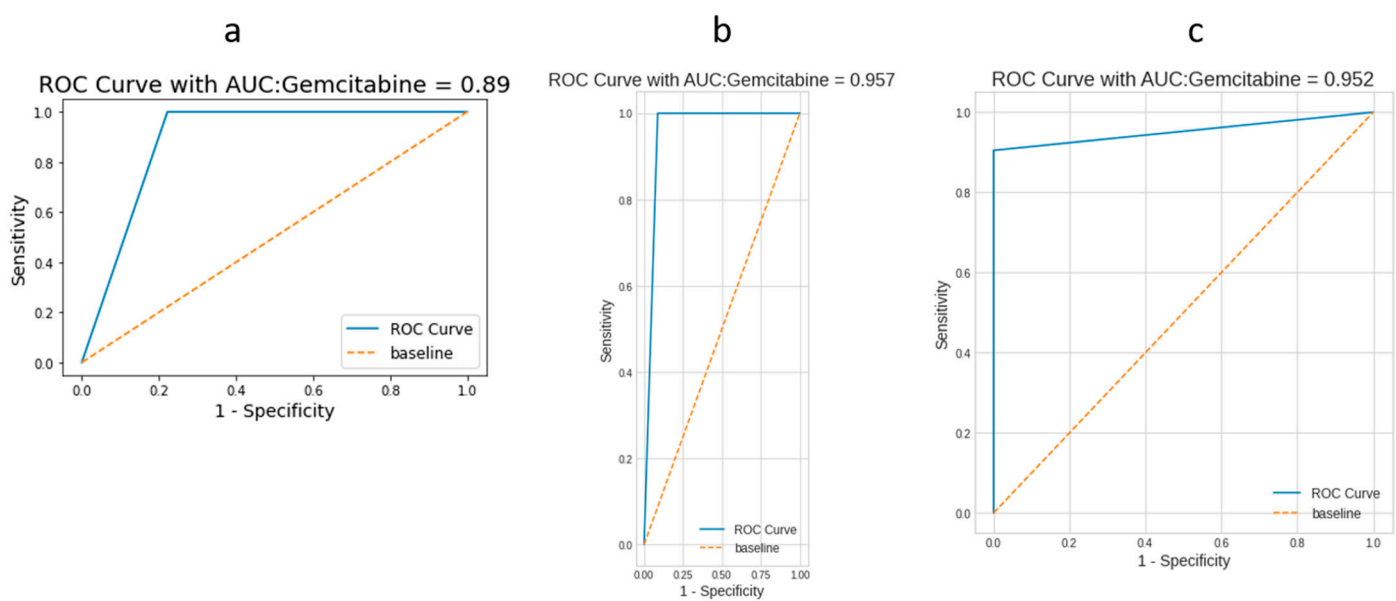

Figure S6. AUC for Gemcitabine. **a:** SVM. **b:** Random Forest. **c:** DCNN-DR.

Table S1. Performance measures of subtype model.

Omics data used	fscore	Accuracy Avg	AUC score	Min Cost
Integrated data auto encoder accuracy	0.96	0.94	0.988	0.96
Single omics protein data all	0.4	0.488	0.68	1.41299
Single omics Methylation Data	0.86	0.84	0.97	1.078
Single Omics Clinical Data	0.54	0.52	0.75	1.39
Single Omics RNA data	0.9	0.93	0.97	0.97
Single Omics mirna	0.88	0.91	0.975	1.004725

Table S2. Top ranked genes with their p-values after feature engineering.

Features	P values
TP53	5.08×10^{-07}
CDH1	1.34×10^{-04}
EGFR	1.84×10^{-03}
ANKS4B	4.85×10^{-03}
B3GAT1	6.30×10^{-03}
ESR1	6.43×10^{-03}
TMEM90A	6.88×10^{-03}
TRIP10	8.09×10^{-03}
INPP4B	2.53×10^{-02}
SNAP91	3.21×10^{-02}
NDRG1	5.07×10^{-02}
C1orf74	5.49×10^{-02}
BCL2L14	7.11×10^{-02}
DMRT2	1.13×10^{-01}
CFH	1.13×10^{-01}
EN2	1.49×10^{-01}
PGR.1	1.61×10^{-01}
PGR	1.61×10^{-01}

Table S3. PCC and MSE of all the drugs after regression.
