Supplemental figure S2. Box and whisker plot showing the relationship between quantity of enhancement on multiphase CT and iodine concentration.

TUE: true unenhanced; PVP: portal venous phase

Red dotted line: enhancement on multiphase CT (≥20 ΔHU)

Horizontal lines in box represents median value. Top and bottom of boxes represent 25th–75th percentiles of data values. The whiskers (vertical lines) represent minimum and maximum values (excluding outliers).

- *Outlier: 3rd quartile + 1.5*interquartile range or 1st quartile – 1.5*interquartile range*
