11 **Figure S1.** Map of the surveyed areas in Piedmont. Blue surface (Cuneo province), and yellow surface  
 12 (Asti province) referred to the study on the parasitization rate of *Oligosita cf collina*. Red surface (Turin  
 13 province) refers to the comparison between the parasitization rate of *Neodryinus typhlocybae* and  
 14 *Oligosita cf collina* group on *Metcalfa pruinosa*. The green plots on the map represent the wine-growing  
 15 municipalities in Piedmont region.

16

17 **Table S1.** Study on the parasitization rate of *Oligoista cf collina* during 2017 and 2018: coordinates of the collection sites.

20

21 **Table S3.** Results of the selected generalized linear mixed effects model (GLMM) testing the effects on the parasitization rate of Plant Species, Host Egg  
 22 Density, Plant Cover and the interaction between Host Egg Density and Plant Cover.

Parameter	Estimate	SE	z	P
(Intercept)	-1.08589	0.08678	-12.512	***
<i>Corylus avellana</i> .	-0.28625	0.09458	-3.026	**
<i>Vitis</i> spp.	0.26396	0.06839	3.859	***
Host Egg Density	0.52363	0.06935	7.550	***
Plant Cover	0.28382	0.05300	5.355	***
Host Egg Density: Plant Cover	0.10732	0.05420	1.980	0.047704

23 SE standard error of parameter estimates. z z-score testing whether the parameter estimate is significantly different from zero. Pr(|z|) probability of the  
 24 observed z-score being greater than the critical value. Significant at  $\leq 0.05$  (\*).  $\leq 0.01$  (\*\*).  $\leq 0.001$  (\*\*\*) not significant (NS).

25

26      **Table S4.** Candidate GLMM predicting the *Metcalfa pruinosa* egg parasitization (dependent variable corresponds to success or failure of parasitization). Best  
 27      subset selection approach was used; results shown only the top 10 candidate models. Group Site nested within Area was included as random effect in all  
 28      models to take into accounts the dependences among measures in each Area (1 l area/site)".

Response variable: number of eggs ejected from communal nest			Overall model significance		
	Fixed effects	AIC <sub>i</sub>	ΔAIC <sub>i</sub>	Wald's X <sup>2</sup>	P
