

Table S1. After five weeks of exposure to phase B (Temperature:Photoperiod conditions), unopened cocoons were transferred for one month to summer conditions (20 °C, 16:8 L:D). This table summarizes the number of individuals transferred (N) and the percentage of which that resumed their activity (Perc.).

Temperature (°C)		5				10				15				20			
Larval instar		L3		L4		L3		L4		L3		L4		L3		L4	
		N	Perc.	N	Perc.	N	Perc.	N	Perc.	N	Perc.	N	Perc.	N	Perc.	N	Perc.
Photoperiod (L:D)	8:16	14	57.14	8	75.00	6	0.00	3	33.33	5	0.00	0	0.00	0	0.00	0	0.00
	10:14	14	35.71	14	14.29	8	0.00	6	0.00	6	0.00	10	0.00	2	0.00	2	0.00
	12:12	7	71.43	16	75.00	5	0.00	14	0.00	1	0.00	0	0.00	0	0.00	3	0.00
