Supplemental Figure S1. Methylation status of LINE-1 in 10 MPM cell lines treated with guadecitabine

Genomic DNA was extracted from 10 MPM cell lines treated with 1 µM of guadecitabine. Real-time qMSP analyses of LINE-1 were performed on bisulfite modified genomic DNA using methylated- or unmethylated-specific primer pairs.
Data are reported as % of LINE-1 methylation in guadecitabine treated vs untreated cells.
