

**Table S1.** Training summary data for a make masters off-road triathlete. Total training hours are broken down into relative sport training. Percent time in HR zones is for cycling and running combined; no HR was recorded during swimming. Approximately 20% of cycling took place mountain biking.

	2015	2016	2017	2018	2019
Total Training (hrs)	470.5	461.3	482.6	467.0	456.7
<b>Training Discipline</b>					
Swim	17.0%	18.1%	13.9%	12.4%	13.7%
Bike	50.4%	48.1%	53.6%	52.6%	49.2%
Run	28.4%	29.3%	28.8%	30.8%	31.5%
Strength Training	4.3%	4.4%	3.6%	4.2%	5.6%
<b>Heart Rate Zones</b>					
Zone 1	70.3%	72.8%	77.1%	73.5%	76.6%
Zone 2	24.4%	22.3%	19.3%	22.4%	19.6%
Zone 3	5.3%	4.9%	3.7%	4.1%	4.4%

**Figure S1.** Graphical presentation of yearly HR TRIMP training load calculated based on a simplified 3-phase TRIMP score was calculated by multiplying the total duration in each HR zone by 1 for Zone 1, 2 for Zone 2, and 3 for Zone 3, then totaling the result.<sup>10</sup>

**Table S2.** Results reports for ordinary least squares regression analysis for cycling and running.

Events are significantly different, there does not appear to be differences between CXT and RXT; ROAD is quicker. CXT is significantly less work/min than the road, and not significantly different than the regional, even when adjusting for elevation gain and time, which significantly impact the kj/min work rate with elevation(+) and time(-).
