

Figure S3. Whole-genome nucleotide pair-wise comparisons of *Chlamydia pecorum* from koalas. Blue shading indicates nucleotide identity between sequences according to BLASTn (85 to 100%). Plasticity zone (red) and major polymorphic membrane protein gene cluster (blue) are labelled. Strains Gun/koa1/Ure, IPTaLE, and SA/k2/UGT are represented as draft genomes. Image created using Easyfig v2.2.2.
