

Supplemental Figure S1. Flow diagram of method 1. Thus, method 1 allows testing of direct effects of electric field on the previously secreted enzyme.

Supplemental Figure S2. Flow diagram of method 2 with enzyme assays performed on the subsequent supernatant and pellet fractions. Thus, method 2 allows assessment of the effect of electric field on secretion of acid phosphatase from cells.

Table S1. Effects of Electrical Stimulation, at 50 Hz Applied After Fractionation, on SAP Activity.

50 Hz Cathodic Monophasic				
Current (μ A)	Supernatant Percent Difference		Pellet Percent Difference	
	Mean \pm SD	P-Value	Mean \pm standard Deviation	P-Value
100	5.22 \pm 0.12	< 0.0001	-2.88 \pm 0.34	< 0.0001
150	0.34 \pm 0.11	0.0158	1.51 \pm 0.16	0.0013

400	0.979 \pm 0.069	0.0039	-1.02 \pm 0.34	< 0.0001
500	-1.34 \pm 0.17	0.0061	0.47 \pm 0.98	0.0721
50 Hz Anodic Monophasic				
Current (μ A)	Supernatant Percent Difference		Pellet Percent Difference	
	Mean \pm standard Deviation	P-Value	Mean \pm standard Deviation	P-Value
100	-0.28 \pm 0.59	0.0013	-1.15 \pm 0.28	0.0019
150	0.52 \pm 0.14	0.0001	1.68 \pm 0.29	0.0377
200	-0.635 \pm 0.068	0.0001	6.46 \pm 0.80	0.7418
250	-0.67 \pm 0.14	< 0.001	-5.496 \pm 0.015	0.0151
300	-0.27 \pm 0.13	0.0003	-1.33 \pm 1.44	< 0.0001
400	-0.735 \pm 0.066	< 0.0001	7.09 \pm 0.31	0.0198
500	-0.54 \pm 0.18	0.0003	3.12 \pm 2.24	0.0009

Shown are the average percent difference from control \pm SD for monophasic cathodic, symmetric biphasic, and monophasic anodic, at a frequency of 50 Hz, where fractionation occurred before electrical stimulation (Method 1). Statistical significance relative to control cells was determined by two-tailed Student's T-Tests. n = 3; α = 0.05. Negative mean values indicate values lower than control (no electrical stimulation) cell values.

Table S2. Effects of Electrical Stimulation, at 10,000 Hz Applied After Fractionation, on SAP Activity.

10,000 Hz Cathodic Monophasic				
Current (µA)	Supernatant Percent Difference		Pellet Percent Difference
