^a Serotype, mostly investigated by PCR; ^b Clade according to Kittichotirat 2016; ^c Lineage according to this study

Table S2. Lineage-specific genes (annotated by PROKKA)

Lineage I; 22 study strains including the type, 1 reference sequence

Lineage-specific genes, N=37

Hypothetical: 23

Annotated: 14

Acetolactate synthase isozyme 2 large subunit

Chorismate pyruvate-lyase

Dephospho-CoA kinase

DNA ligase

DNA topoisomerase 1

GDP-mannose 4,6-dehydratase

Glutamate 5-kinase

L-threonine dehydratase biosynthetic IlvA

L-threonine dehydratase biosynthetic IlvA

Opacity-associated protein OapA

Putative racemase YgeA

Signal recognition particle receptor FtsY

Stringent starvation protein B

tRNA-Val(tac)

Lineage II; 6 study strains, 5 reference sequences

Lineage-specific genes, N=89

Hypothetical: 73

Annotated: 16

Antitoxin HigA

Cell division protein FtsZ

Chaperone protein YcdY

Chorismate pyruvate-lyase

Cold shock-like protein CspC

CRISPR pre-crRNA endoribonuclease Cas5d

Dephospho-CoA kinase

Endoribonuclease HigB

Histidine biosynthesis bifunctional protein HisIE

Membrane sensor protein UhpC

Multidrug resistance protein MdtA

NADH dehydrogenase

Ribosomal protein S12 methylthiotransferase RimO

Swarming motility protein SwrC

Tyrosine recombinase XerC

Tyrosine-specific transport protein

Lineage III; 6 study strains

Lineage-specific genes, N=81

Hypothetical: 61

Annotated: 20

5-formyltetrahydrofolate cyclo-ligase

Beta-galactosidase

Beta-hexosaminidase

Chorismate pyruvate-lyase

CRISPR-associated endoribonuclease Cas2

CRISPR-associated exonuclease Cas4/endonuclease Cas1 fusion

Dephospho-CoA kinase

Ferrichrome outer membrane transporter/phage receptor

Glutamate racemase

IMPACT family member YigZ

Putative fluoride ion transporter CrcB

putative protein

putative protein/HI_1462.1

putative tRNA/rRNA methyltransferase

putative tRNA/rRNA methyltransferase YfiF

Regulatory protein RecX

Rhomboid protease GlpG

Ribosome-associated ATPase

Sulfur acceptor protein CsdE

Thymidylate kinase
