

**A****B**

**Figure S1.** Multiple sequence alignment of *sRPB2* (A) and *sTEF-1α* (B). Analysis was performed with ClustalW [61] in MEGA version 7.0.26 [62]. Partial sequences of *RPB2* of *Trichoderma istrianum* (Accession KJ665281.1) and *TEF-1α* of *Fusarium pseudograminearum* (Accession JX118971.1) were included. Alignments were processed in T-Coffee version 11.00 [63] and ESPrpt version 3.0 [64]. Primers are shown as black arrows. *sRPB2* and *sTEF-1α* are short variable subsections of *RPB2* and *TEF-1α* selected for HRM analysis.

**Figure S2.** Sampling sites ( $n = 30$ ) of the naturally *Fusarium*-infected maize ears across Germany. Black solid lines represent federal states. At each site, between 1 and 9 maize ears were collected. In total, 100 maize ears.

**Table S1.** Reference strains of *Fusarium* used in this study.

| Strain ID <sup>1</sup> | Formae specialis                               | Isolated from                  | Country of origin |
|------------------------|------------------------------------------------|--------------------------------|-------------------|
| BBA65106               | <i>F. acuminatum</i>                           | Artemisia                      | Germany           |
| BBA69055               | <i>F. anguoides</i>                            | Soil                           | Japan             |
| BBA71186               | <i>F. arthrosporioides</i>                     | Bellis                         | Germany           |
| DSM62161               | <i>F. avenaceum</i> (Corda: Fr.) Saccardo      | <i>Dianthus caryophyllus</i>   | Germany           |

| NRRL20956              | <i>F. verticillioides</i> (Saccardo) Nirenberg | <i>Zea mays</i>                | USA               |

<sup>1</sup>Fungal strains were obtained from German Collection of Microorganisms and Cell Cultures, Braunschweig, Germany (DSM); Westerdijk Fungal Biodiversity Institute, Baarn, Holland (CBS); Prof. Bettina Tudzynski, University of Muenster, Germany (IMI); Dr. Susanne Vogelgsang, Agroscope, Switzerland (ESIER); Prof. Tapani Yli-Mattila, University of Turku, Finland (BBA); and fungal collection of the laboratory (RD15, 204.2c).

**Table S2.** Melting temperature and GC-content of *sRPB2* and *sTEF-1α* amplicons of reference strains.

| <i>sRPB2</i>                        |                                |                |
|-------------------------------------|--------------------------------|----------------|
| <i>Fusarium strain</i> <sup>1</sup> | mean $T_m \pm SD$ <sup>2</sup> | GC-content (%) |
| <i>F. cerealis</i> DSM8704          | 88.63 $\pm$ 0.06               | 54             |
| <i>F. culmorum</i> DSM62188         | 87.90 $\pm$ 0.00 <sup>3</sup>  | 53             |
| <i>F. equiseti</i> DSM62202         | 87.97 $\pm$ 0.06 <sup>3</sup>  | 51             |
| <i>F. graminearum</i> NRRL13383     | 88.10 $\pm$ 0.00               | 53             |
| <i>F. poae</i> DSM62376             | 89.00 $\pm$ 0.00               | 54             |
| <i>F. temperatum</i> MUCL52463      | 86.27 $\pm$ 0.06               | 49             |
| <i>F. tricinctum</i> DSM23357       | 87.50 $\pm$ 0.00               | 52             |
| <i>F. verticillioides</i> NRRL20956 | 86.77 $\pm$ 0.06               | 50             |
| <i>sTEF-1α</i>                      |                                |                |
| <i>F. culmorum</i> DSM62188         | 85.73 $\pm$ 0.06               | 49             |
| <i>F. graminearum</i> NRRL13383     | 86.17 $\pm$ 0.06               | 50             |

<sup>1</sup> Fungal strains were obtained from German Collection of Microorganisms and Cell Cultures, Braunschweig, Germany (DSM); ARS culture collection, Peoria, IL, USA (NRRL); and Dr Jonathan Scauflaire, Earth and Life Institute, Louvain-la-Neuve, Belgium (MUCL). <sup>2</sup> Mean melting temperature ( $T_m$ ) and standard deviation (SD) were calculated from three replicates. <sup>3</sup> *sRPB2* amplicons of *F. culmorum* and *F. equiseti* had the same melting temperature but could be distinguished with the help of an additional melting domain of the amplicon of *F. equiseti*, which caused a shoulder of the melting curve (Figure 2 C, E).

**Table S3.** Identification of dominant *Fusarium* species in naturally infected maize ears by HRM. Aliquots of DNA extracted from entire maize ears including rachis were used in the analysis.

| <i>Fusarium</i> Species   | Number of Ears |
|---------------------------|----------------|
| <i>F. graminearum</i>     | 64             |
| <i>F. verticillioides</i> | 10             |
| <i>F. temperatum</i>      | 6              |
| <i>F. poae</i>            | 2              |
| <i>n.i.</i> <sup>1</sup>  | 18             |

<sup>1</sup> *n.i.* = not identified.

**Table S4.** Melting temperature of *sRPB2* and *sTEF-1α* amplicons of additional *Fusarium* species.

| <i>sRPB2</i>                         |                                  |
