

Supplementary Table 1: Predicted human T cell and B cell epitopes predicted on TpUB05 antigen

Immune epitopes on TpUB05 antigen were predicted *in silico* using algorithms found on www.iedb.org. MHC I and II binding peptides presented here are those with a percentile rank below 1.0. Percentile rank below 1.0 were considered as those with a very high affinity for the MHC molecules. The lower the percentile rank the stronger the binding affinity. These would have to be tested *in vitro* and *in vivo* to confirm their immunogenicity.

No.	MHC I binding peptides	MHC II binding peptides	Antibody epitopes
