

Supplementary Figure 1. ST2 receptor deficiency does not influence the production of IFN- γ and TNF- α in liver after *Brucella abortus* infection. WT and ST2^{-/-} mice were infected orally with 1×10^9 CFU of *B. abortus* and after 3 or 14 days of infection liver samples were assessed for cytokine production, such as TNF- α (A), IFN- γ (B) by ELISA. Results expressed as mean \pm standard deviation (n = 5).
