Supplementary material of the manuscript entitled 'Characterization of bacterial communities on trout skin and eggs in relation to *Saprolegnia parasitica* infection status' by Dora Pavić, Sunčana Geček, Anđela Miljanović, Dorotea Grbin and Ana Bielen

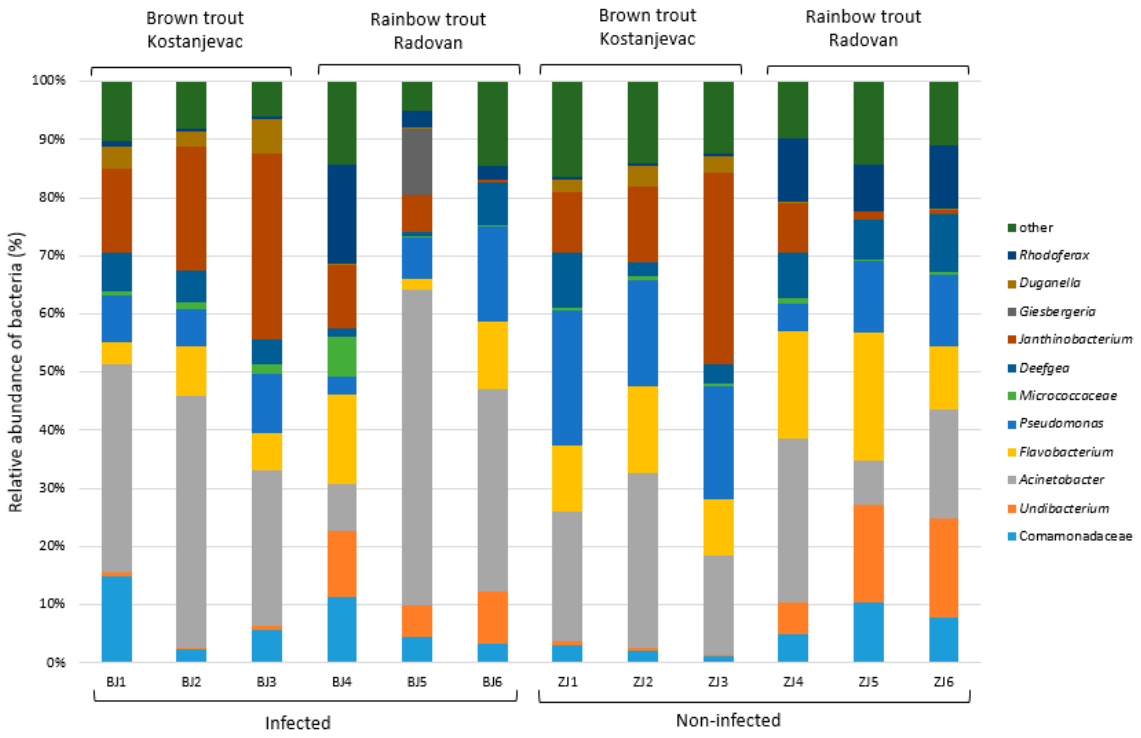

Figure S1. Relative abundance (%) of the bacterial families in the collected egg samples (N=12). Bacterial families with relative abundance > 5% are shown, while the remaining were pooled and indicated as "other". K – Kostanjevac, R – Radovan and S – Solin.

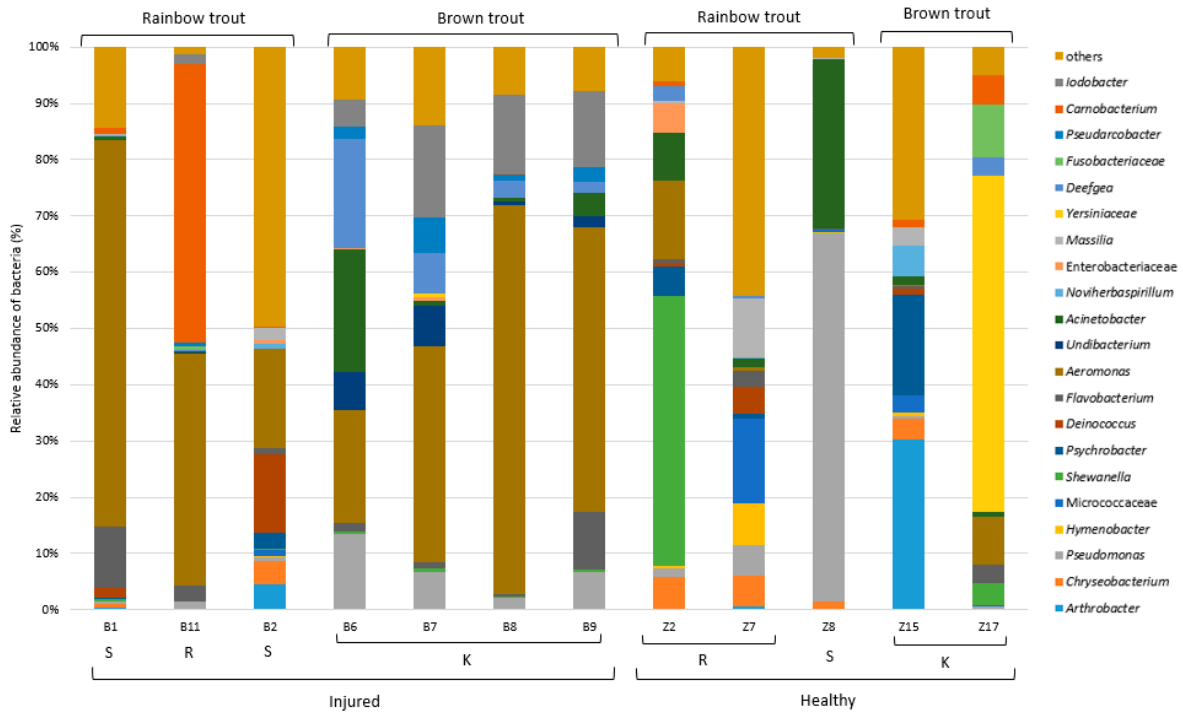

Figure S2. Relative abundance (%) of the bacterial families in the collected adult trout samples (N=12). Bacterial families with relative abundance > 5% are shown, while the remaining were pooled and indicated as "other". K – Kostanjevac, R – Radovan and S – Solin.
