

Supplementary Materials: Small molecule inhibitors of the response regulator ArsR exhibit bactericidal activity against *Helicobacter pylori*

Andrés González, Javier Casado, Eduardo Chueca, Sandra Salillas, Adrián Velázquez-Campoy, Javier Sancho and Ángel Lanas.

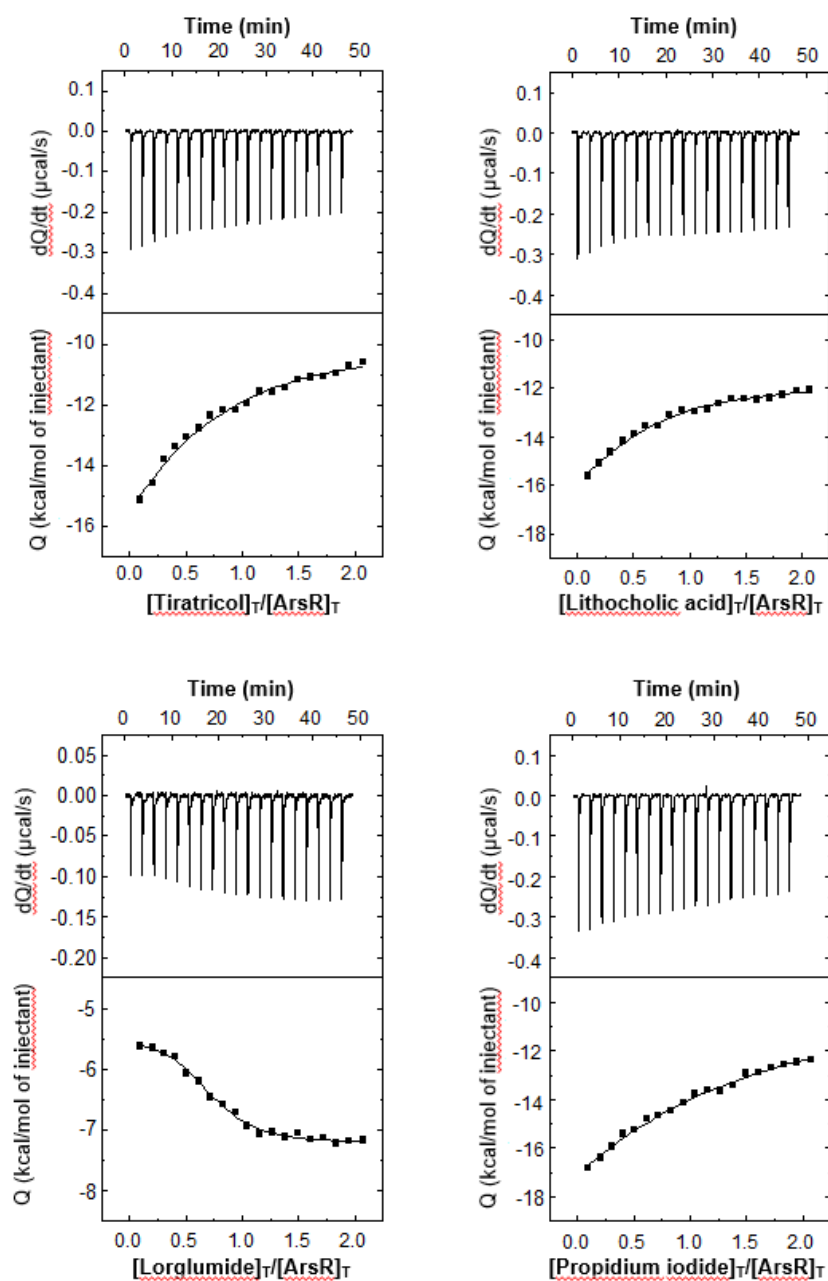

Figure S1. Isothermal titration calorimetry experiments for the interaction of the *H. pylori* ArsR response regulator with its inhibitors. In the figure, upper panels show the ITC thermograms while lower panels show the binding isotherms.
