

Supplementary file

Supplementary Table S1. Distribution of samples used in this study by cohort, date of collection or DNA extraction (GTEx) and population.

Cohort	Date of collection or DNA extraction	Population		
		European	East Asian	Other
TCGA	2010	37	0	0
GTEx		0	0	0
TCGA	2011	66	7	0
GTEx		22	0	0
TCGA	2012	83	54	0
GTEx		54	0	0
TCGA	2013	36	0	4
GTEx		76	0	0
TCGA	2014	15	4	69
GTEx		12	0	0

Supplementary Table S2. List of bacterial species used in this study based on the species identified by the Human Microbiome [1] and MetaHit [2] projects complemented by species identified by Rajilić-Stojanović and de Vos [3]. Additional species appearing in disease conditions identified by Ferreira et al were also added [4]. One representative strain was chosen for each species.

Supplementary Figure S1. Schematic representation of the QmihR pipeline [5].

Supplementary Figure S2. Quality control assessment of the TCGA stomach adenocarcinoma samples based on the raw bacterial counts and alpha diversity (Shannon). (A) Boxplot distribution of the alpha diversity based on shipment year. (B) scatterplot of the distribution of raw reads according to the Shannon diversity index throughout the different shipment years. (C) T-distributed Stochastic Neighbour Embedding (t-SNE) plot based on the Weighted UniFrac distance between samples.

Supplementary Table S3. Percentage of abundance per sample of *Helicobacter* and of genera that reach a value of 90% (*Escherichia*, *Lactobacillus* and *Pseudomonas*), with information of country of origin and year of shipment.

Sample	Country	Date	<i>Escherichia</i>	<i>Helicobacter</i>	<i>Lactobacillus</i>	<i>Pseudomonas</i>

Supplementary Figure S3. Genus richness in the inferred microbiome patterns between the GTEx non-cancer samples and the TCGA cancer samples from the sample ancestral background (European and United states). A- Good's coverage, Chao1, Shannon and evenness in inferred microbiome patterns.

Supplementary Figure S4. Violin plot representation of the relative abundance for the statistically significant differentiated genera in the four cancer stages (AJCC pathological tumour staging) and GTEx non-cancer dataset.
