

**Table S1.** The following table contains values of biomass production in milligrams (mg) for the 200 strains submitted to the toluene assimilation test in each treatment, growth ratios, as well as their identification and source. GC = biomass produced with glucose as the carbon source; NC = biomass produced in the absence of a carbon source; TL = toluene as the sole carbon source added with dibutyl phthalate; TH = toluene as the sole carbon source.

Sample ID	Identification	Substrate	Isol. Method	Characterization	GC	NC	TL	TH	GC/NC	TH/NC	TL/NC
