

Figure S1: Camel oocyte morphometry parameters. Scale bar = 50 μm .

Figure S2: Effect of short-term supplementation on cumulus morphology of COCs. A: Control group, B: Cumulus morphology after pre-IVM with RI for 2 hour, C: Cumulus morphology after pre-IVM with RI for 4 hour, and D: Cumulus morphology after pre-IVM with RI for 6 hour. All groups were in comparison with control group and cumulus morphology after pre-IVM showed no significant difference. **Scale bar = 100 µm.**
