

Table S1. The diameter of the cervix and diameter of left and right uterine horns, mean daily milk yield for the first 60 days of lactation and blood concentrations of total cholesterol, triglycerides, non-esterified fatty acids, β -Hydroxybutyrate across all studied groups (Mean \pm SD). P100- pregnant animals up to 100 days postpartum, P200- pregnant between 100 and 200 days postpartum, C- culled (including two cows sold to other farms at day 70 and 92 postpartum, two cows culled at 145 and 173 because of lameness and six not pregnant after 200 days), ϕ C- cervix diameter, ϕ LH- left horn diameter, ϕ RH- right horn diameter, MY60- mean daily milk yield for first 60 days of lactation, TC- total cholesterol, TG- triglyceride, NEFA- non-esterified fatty acids, BHBA- β -Hydroxybutyrate, P⁴-progesterone.

Parameter	n	P100	P200	C	<5% PMNs	>5% PMNs	<10% PMNs	>10% PMNs
