\* 30 samples were below the assay lower limit of detection of 12.2 pg/mL. # 21 samples were below the assay lower limit of detection of 12.2 pg/mL.

§ 57 samples were below the assay lower limit of detection of 12.2 pg/mL. + 58 samples were below the assay lower limit of detection of 12.2 pg/mL.

@ 14 samples were below the assay lower limit of detection of 12.2 pg/mL. ^ 52 samples were below the assay lower limit of detection of 12.2 pg/mL.

**Table S2.** Fixed effect P-values for linear mixed effects models analyzing coagulation and inflammation biomarkers over time in dogs randomized to receive 6% hydroxyethyl starch 130/0.4 or Hartmann's solution. These models contained a random effect of dog, nested within treatment, and additional covariates of reason for admission, presence of sepsis, APPLE<sub>fast</sub> score, and volume of study fluid administered. Significant results (P<0.05) are bold.

| Biomarker                             | Time main effect | Treatment main effect | Treatment-by-time interaction effect |
