

Supplementary Materials

Figure S1. Whole Western blot analysis demonstrating recognition of Vpmas by mono-specific Vpma antisera after extraction of lipoprotein fractions by Triton X-114. Lane 1: *M. agalactiae* strain PG2; Lane 2: *M. agalactiae* strain GM139; Lane 3: *M. gallisepticum* (negative control); MW: molecular weight protein marker.

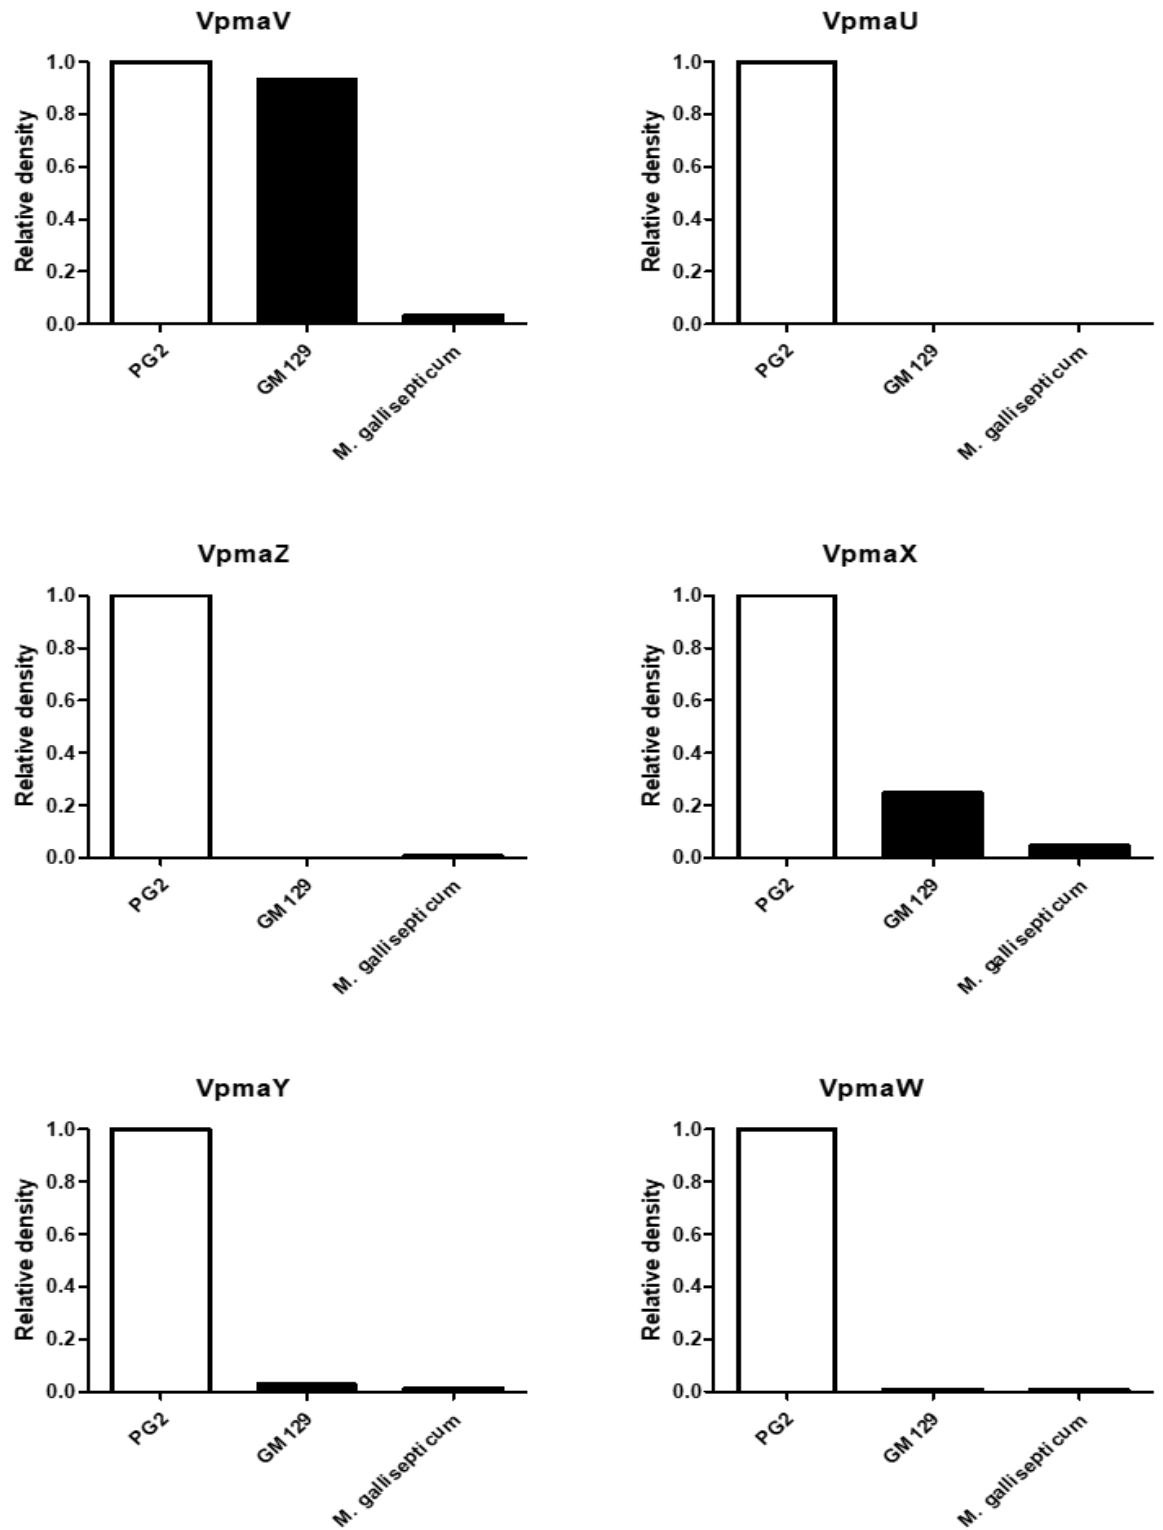

Figure S2. Densitometric analyses using ImageJ software. Western blotting band densities of Vpmas presented in Figure 1B. Each band densities were quantified as a ratio to Vpma from PG2 strain.
