

Supplementary data

Table S1: Pairwise comparisons for two-way interaction model between forelimb diagnostic anaesthesia 'efficacy' and 'type' for outcome variable DHDmin, i.e. head movement asymmetry associated with changes in weight-bearing between contralateral forelimbs.

Given are mean differences (in mm), standard error (in mm), degrees of freedom, significance achieved, upper and lower bounds of 95% confidence intervals for the pairwise difference (in mm). Pairwise significant differences at $P < 0.05$ after Bonferroni correction are indicated with '*'.

Forelimb block types: ASNB: abaxial sesamoid nerve block; Low4: Low4-point nerve block; PD: palmar digital nerve block; other: all other nerve/joint blocks.

Efficacy: neg: negative block (0 to 30% perceived change); part pos: partially positive block (>30 to 70% perceived change; pos: positive block (>70% change).

Based on estimated marginal means

*. The mean difference is significant at the .05 level.

a. Dependent Variable: DHDmin.

c. Adjustment for multiple comparisons: Bonferroni.

Table S2: Pairwise comparisons for two-way interaction model between forelimb diagnostic anaesthesia ‘efficacy’ and ‘type’ for outcome variable DHDmax, i.e. head movement asymmetry associated with changes in pushoff between contralateral forelimbs.

Given are mean differences (in mm), standard error (in mm), degrees of freedom, significance achieved, upper and lower bounds of 95% confidence intervals for the pairwise difference (in mm).

Pairwise significant differences at $P < 0.05$ after Bonferroni correction are indicated with ‘*’.

Forelimb block types: ASNB: abaxial sesamoid nerve block; Low4: Low4-point nerve block; PD: palmar digital nerve block; other: all other nerve/joint blocks.

Efficacy: neg: negative block (0 to 30% perceived change); part pos: partially positive block (>30 to 70% perceived change; pos: positive block (>70% change).

Based on estimated marginal means

*. The mean difference is significant at the .05 level.

a. Dependent Variable: DHDmax.

c. Adjustment for multiple comparisons: Bonferroni.

Table S3: Pairwise comparisons for two-way interaction model between forelimb diagnostic anaesthesia ‘efficacy’ and ‘type’ for outcome variable DHDup, i.e. head movement asymmetry associated with changes in upward movement amplitudes between stride halves.

Given are mean differences (in mm), standard error (in mm), degrees of freedom, significance achieved, upper and lower bounds of 95% confidence intervals for the pairwise difference (in mm). Pairwise significant differences at $P < 0.05$ after Bonferroni correction are indicated with ‘*’.

Forelimb block types: ASNB: abaxial sesamoid nerve block; Low4: Low4-point nerve block; PD: palmar digital nerve block; other: all other nerve/joint blocks.

Efficacy: neg: negative block (0 to 30% perceived change); part pos: partially positive block (>30 to 70% perceived change; pos: positive block (>70% change).

Pairwise Comparisons^a

(I) Type x Efficacy	(J) Type x Efficacy	Mean Difference (I-J)	Std. Error	df	Sig. ^c	95% Confidence Interval for Difference ^c

Based on estimated marginal means

*. The mean difference is significant at the .05 level.

a. Dependent Variable: DHDup.

c. Adjustment for multiple comparisons: Bonferroni.

Table S4: Pairwise comparisons for two-way interaction model between forelimb diagnostic anaesthesia ‘efficacy’ and ‘type’ for outcome variable DPDmax, i.e. compensatory pelvic movement asymmetry associated with changes in pushoff between contralateral hind limbs.

Given are mean differences (in mm), standard error (in mm), degrees of freedom, significance achieved, upper and lower bounds of 95% confidence intervals for the pairwise difference (in mm). Pairwise significant differences at $P < 0.05$ after Bonferroni correction are indicated with ‘*’.

Forelimb block types: ASNB: abaxial sesamoid nerve block; Low4: Low4-point nerve block; PD: palmar digital nerve block; other: all other nerve/joint blocks.

Efficacy: neg: negative block (0 to 30% perceived change); part pos: partially positive block (>30 to 70% perceived change; pos: positive block (>70% change).

Pairwise Comparisons^a

(I) Type x Efficacy	(J) Type x Efficacy	Mean Difference (I-J)	Std. Error	df	Sig. ^c	95% Confidence Interval for Difference ^c

Based on estimated marginal means

*. The mean difference is significant at the .05 level.

a. Dependent Variable: DPDmax.

c. Adjustment for multiple comparisons: Bonferroni.

Table S5: Pairwise comparisons for two-way interaction model between hind limb diagnostic anaesthesia ‘efficacy’ and ‘type’ for outcome variable DPDmin, i.e. pelvic movement asymmetry associated with changes in weight-bearing between contra-lateral hind limbs.

Given are mean differences (in mm), standard error (in mm), degrees of freedom, significance achieved, upper and lower bounds of 95% confidence intervals for the pairwise difference (in mm). Pairwise significant differences at $P < 0.05$ after Bonferroni correction are indicated with ‘*’.

Forelimb block types: ASNB: abaxial sesamoid nerve block; DBLPN: deep branch of lateral plantar nerve block; Low6: Low6-point nerve block; MTPJ: metatarsophalangeal joint block; TMTJ: tarsometatarsal joint block; other: all other nerve/joint blocks.

Efficacy: neg: negative block (0 to 30% perceived change); part pos: partially positive block (>30 to 70% perceived change); pos: positive block (>70% change).

Pairwise Comparisons^a

		Mean Difference (I-J)	Std. Error	df	Sig. ^c	95% Confidence Interval for Difference ^c	
(I) Type x Efficacy	(J) Type x Efficacy					Lower Bound	Upper Bound

Based on estimated marginal means

*. The mean difference is significant at the .05 level.

a. Dependent Variable: DPDmin.

c. Adjustment for multiple comparisons: Bonferroni.

Table S6: Pairwise comparisons for two-way interaction model between hind limb diagnostic anaesthesia ‘efficacy’ and ‘type’ for outcome variable DPDup, i.e. pelvic movement asymmetry associated with changes in upward movement amplitudes between stride halves.

Given are mean differences (in mm), standard error (in mm), degrees of freedom, significance achieved, upper and lower bounds of 95% confidence intervals for the pairwise difference (in mm). Pairwise significant differences at $P < 0.05$ after Bonferroni correction are indicated with ‘*’.

Forelimb block types: ASNB: abaxial sesamoid nerve block; DBLPN: deep branch of lateral plantar nerve block; Low6: Low6-point nerve block; MTPJ: metatarsophalangeal joint block; TMTJ: tarsometatarsal joint block; other: all other nerve/joint blocks.

Efficacy: neg: negative block (0 to 30% perceived change); part pos: partially positive block (>30 to 70% perceived change); pos: positive block (>70% change).

Pairwise Comparisons^a

(I) Type x Efficacy (J) Type x Efficacy		Mean Difference (I-J)	Std. Error	df	Sig. ^c	95% Confidence Interval for Difference ^c

Based on estimated marginal means

*. The mean difference is significant at the .05 level.

a. Dependent Variable: DPDup.

c. Adjustment for multiple comparisons: Bonferroni.
