

Supplementary Files

This file contains plots supplementary to the article [1].

- The vertical axis is sound pressure level in dB(C) at 0.3 m.
- The horizontal axis is fundamental frequency f_0 in semitones on the MIDI scale, where $60=261.6$ Hz (“middle C”).
- Each ‘pixel’ or cell in the maps is 1 semitone wide and 1 dB tall.

Acoustic metrics are labelled as

“Crest” = crest factor

“SpecBal” = spectrum balance (dB)

“CPPs” = cepstral peak prominence smoothed (dB)

EKG metrics are labelled as

“Entropy” = cycle-rate sample entropy (CSE) (arbitrary units)

“dEKGmax” = Q_{Δ} (normalized maximum EKG slope)

“Qcontact” = Q_{ci} (quotient of contact by integration)

The data were originally collected for the study of Patel and Ternström [2].
