Computation of magnetization in body fragments from vases 1–6

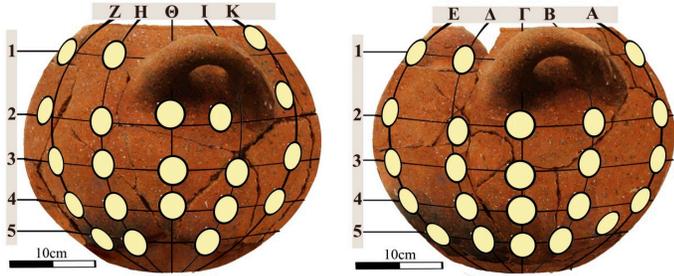

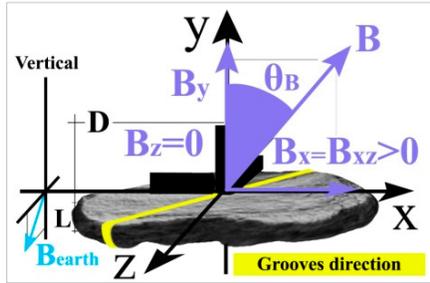

Indicative detailed experimental results with the methodology reported in Section 7 are given (**Tables 1–4**) using measurements of body fragments from **vase 6**.

For each of the remaining vases, 2 tables of measurements are presented. The first table contains measurements of the fragments' thickness, L , of the distance, D , between the measurement position and the fragment edge in the common direction of the M_{xz} , B_{xz} and the sensor readings of B_i ($i=x,z,y$), with the x -sensor aligned along the direction of B_{xz} .

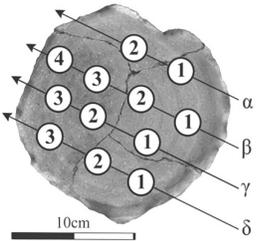

The second table contains the sensor readings of B_i ($i=x,y,z$), with the x -sensor oriented in the grooves' direction on the body fragments.

The above quantities and the relationships 4,5 are used for the calculation of magnetization components.

Table 1. Measurements D, L, and sensor readings of B_i ($i=x,z,y$), with the x-sensor aligned along the common direction of B_{xz} , M_{xz} , on the body fragments of **vase 6**.

Vase 6

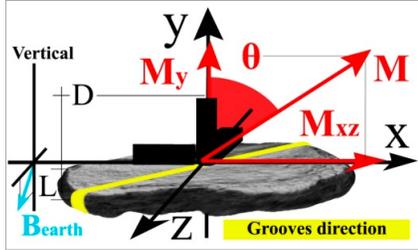

Vase 6 (Base)	λ	$\alpha^i(\text{cm})$	$\alpha^{ii}(\text{cm})$
	1.90	0.71	1.07
	± 0.01	± 0.03	± 0.02

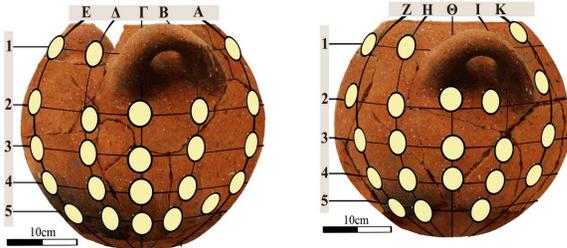

The computed magnitude of field, B, differs, while angles, θ_B , varies in a systematic way.

Table 2. Computation of the angles θ , of the distances d , and of the magnetization components M_y , M_{xz} , from the field components, B_y , B_{xz} , with the x-sensor axis aligned along the common direction of B_{xz} , M_{xz} . The values inside the colored frames ($D < d = L \cdot \tan\theta$) are computed using the sufficient length relationships (4).

Vase 6

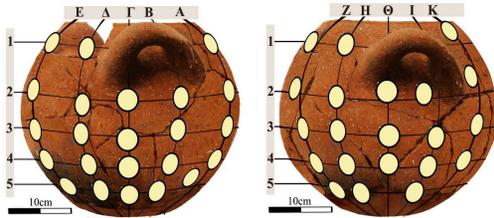

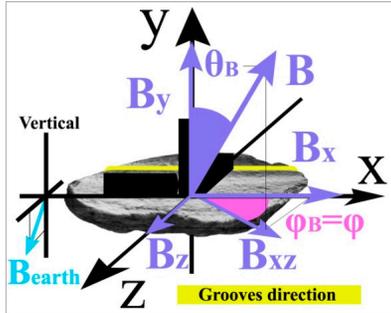

Vase 6 (Base)	M'	M''	M	γ°
	(mA/m)			
	42.5 ± 0.2	39.8 ± 0.2	58.3 ± 0.2	43.3 ± 0.3

The computed magnitude, M , displays similar values in the base and body fragments. For the body fragments, angles, θ , change in a systematic way.
