

Supplementary table 3. Clinical observations following AAV5-miHTT treatment in NHP or rats

Clinical parameter	Cynomolgus monkeys (<i>Macaca fascicularis</i>)	CrI:CD(SD) Sprague Dawley rats
Neurological assessment	Transient absence of reflex responses at an incidence similar to controls	Not reported
Ophthalmic assessment	No treatment effect	Not reported
Body weight	No treatment effect	Differences from controls were of small magnitude and within normal ranges
Food consumption	No treatment effect	No treatment effect
Water consumption	No treatment effect	No treatment effect
Body temperature	No treatment effect	No treatment effect
Peripheral Blood hematology	No treatment effect	No treatment effect
Blood Chemistry	No treatment effect	Differences considered unlikely to be treatment related
Organ weight	No treatment effect	No treatment effect
Macropathology	No treatment effect	No treatment-related lesions
