

Supplemental Information

Maternal Urinary Metal and Metalloid levels in Association with Oxidative Stress Biomarkers in Northern Puerto Rico

Pahriya Ashrap, Deborah J. Watkins, Ginger L. Milne, Kelly K. Ferguson, Rita Loch-Carusio, Jennifer Fernandez, Zaira Rosario, Carmen M. Vélez-Vega, Akram Alshawabkeh, José F Cordero, John D. Meeker

Table 1. Percent change in urinary 8-iso-PGF2 α , 8-iso-PGF2 α metabolite, PGF2 α , 8-iso-PGF2 α chemical fraction, and 8-iso-PGF2 α enzymatic fraction associated with exposure biomarker concentration. Effect estimates presented as percent changes for IQR increase in exposure biomarker concentration. Models were adjusted for specific gravity, study visit, maternal age, maternal education, marital status, pre-pregnancy BMI, and exposure to secondhand smoking.

* denotes p < 0.05; *denotes p < 0.05 & q value (false discovery rate) <0.05.

Table 2. Percent change in urinary 8-iso-PGF2 α , 8-iso-PGF2 α metabolite, PGF2 α , 8-iso-PGF2 α chemical fraction, and 8-iso-PGF2 α enzymatic fraction associated with urinary metal biomarker concentration at each visit during pregnancy. Effect estimates presented as percent changes (%) for IQR increase in exposure biomarker concentration^a. Models were adjusted for study visit, maternal age, maternal education, marital status, pre-pregnancy BMI, and exposure to secondhand smoking.
