

Figure S1. Dose-response plots for the scavenging capacity of: (A) *P. dioica* conchocelis and its corresponding Prolyve (H-Prolyve), and Prolyve plus Flavourzyme (H-ProFla) hydrolysates; (B) trolox. Error bars represent SD from at least 3 independent experiments, assayed at six different concentrations. The control sample corresponds to conchocelis incubated at 50 °C for 4 h without enzymes.
