This Supplementary Materials includes: Mass spectra of epoxy- and hydroxy-epoxy-alkanes (**Figure S1**) and hydroxy-alkenes (**Figure S2**), the two latter as trimethylsilyl derivatives, from reactions of 1-tetradecene with rCciUPO; Inventory of products in the reactions of nine terminal alkenes with six UPOs (**Table S1**); and GC-MS analysis of 1-tetradecene reactions with several UPOs (**Figure S3**).

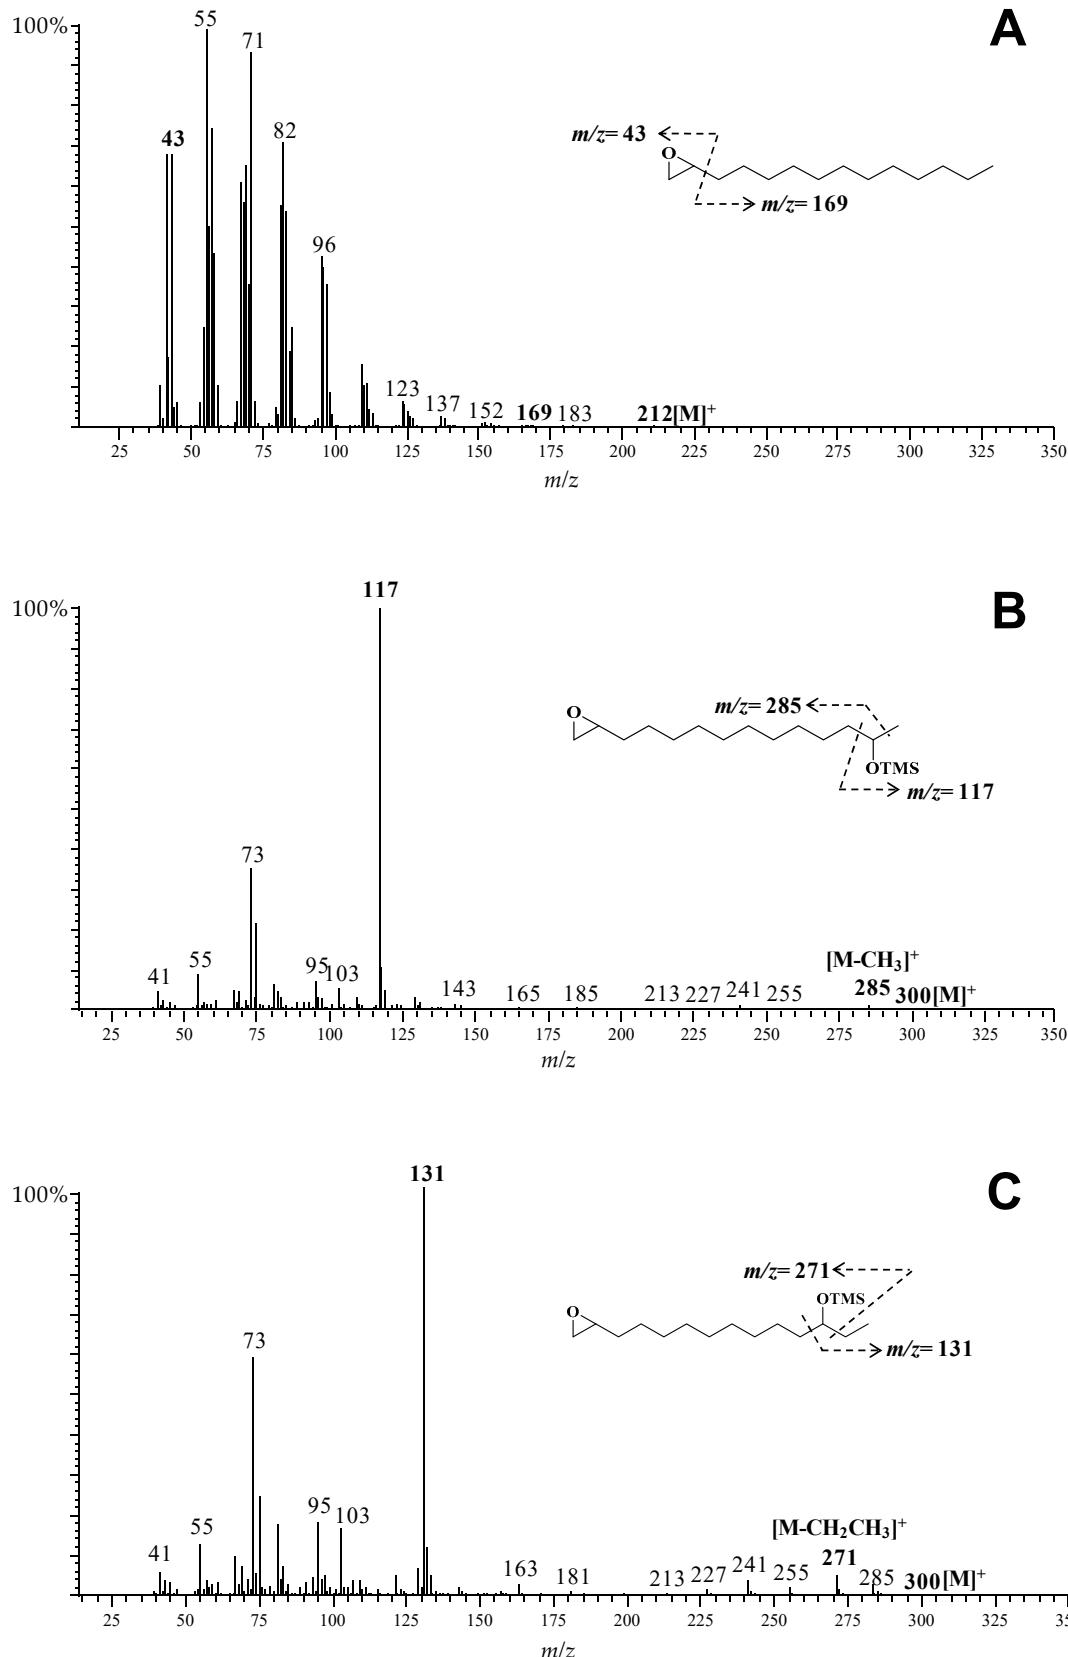

Figure S1. Mass spectra of epoxy- and hydroxy-epoxy- alkanes, the latter as trimethylsilyl derivatives, from reactions of 1-tetradecene with rCciUPO. A) 1,2-epoxytetradecane, B) 1,2-epoxytetradec-13-ol; and C) 1,2-epoxytetradec-12-ol.

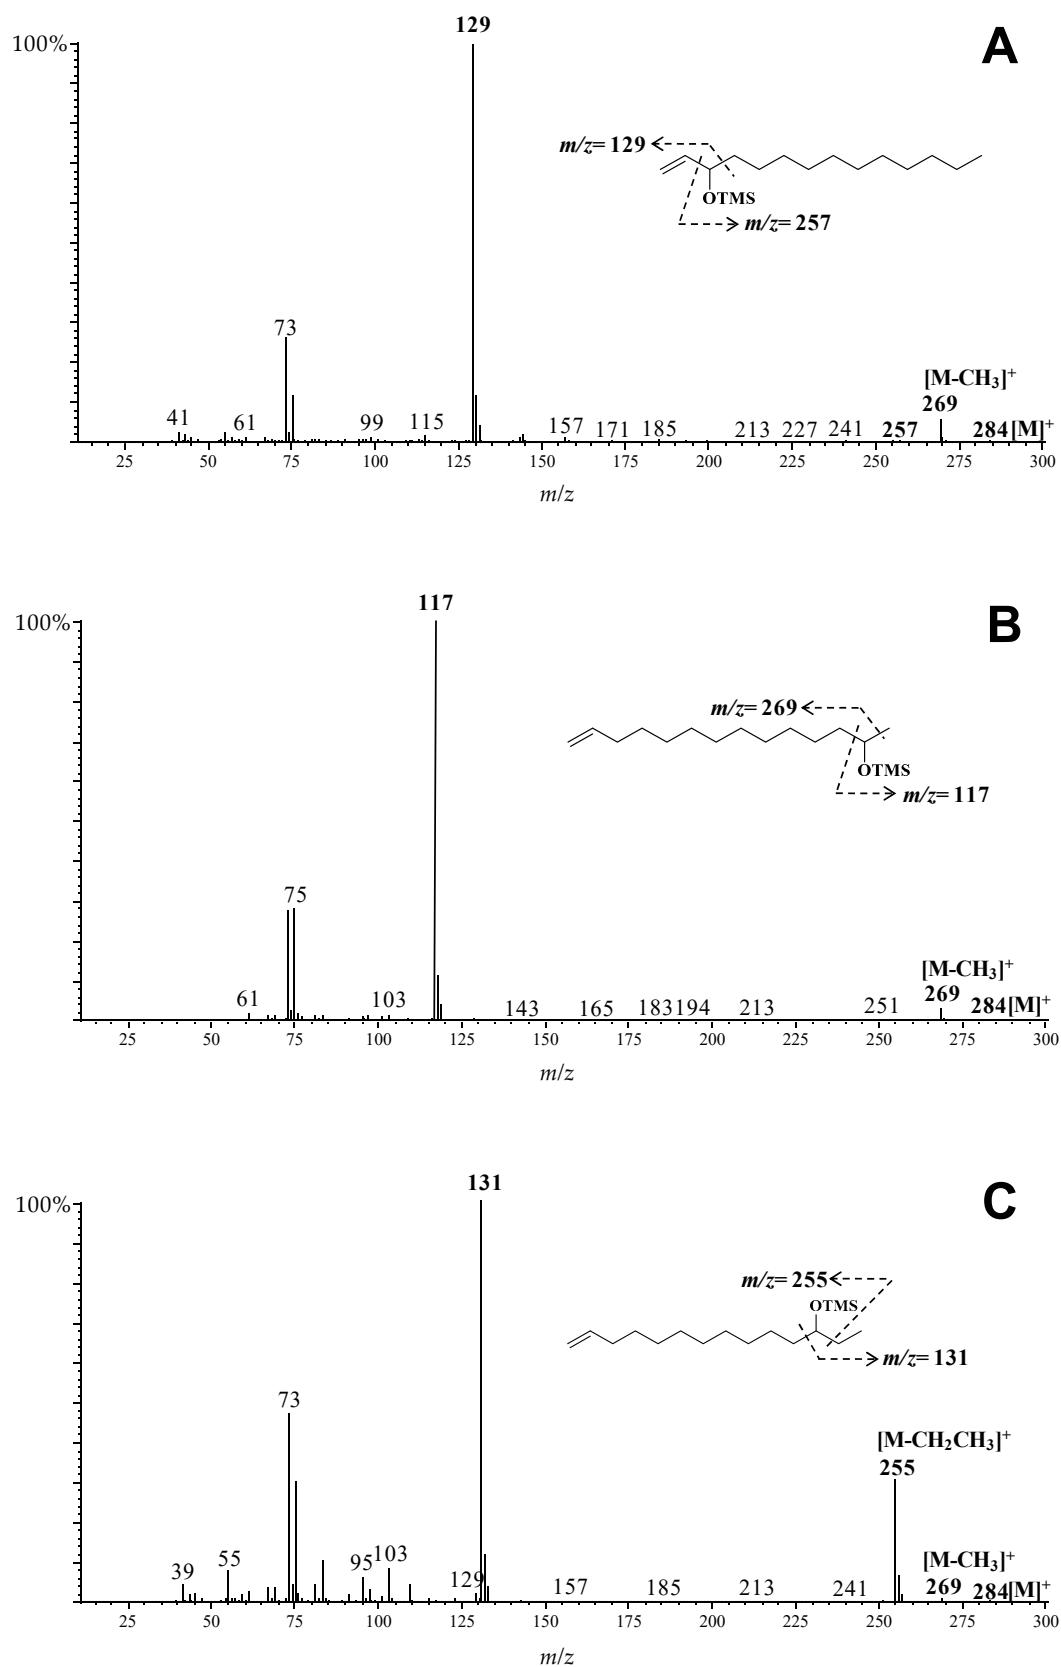

Figure S2. Mass spectra of hydroxy-alkenes, as trimethylsilyl derivatives, from reactions of 1-tetradecene with rC*Ci*UPO; A) tetradecen-3-ol, B) tetradecen-13-ol, and C) tetradecen-12-ol.

Table S1. Inventory of products in the reactions (2 h, 60% acetone, and 3 mM H₂O₂) of nine terminal alkenes (1 mM C_{12:1}-C_{20:1}) with six UPOs (3 μM) yielding: 1,2-epoxy- (E), 3-hydroxy- (3-ol), other hydroxy- (HD), hydroxy-epoxy- (ED), dihydroxy- (di-OH), and carboxylic- (COOH) derivatives.

UPO/alkene	Products (μM)						Total
	E	3-ol	HD	ED	di-OH	COOH

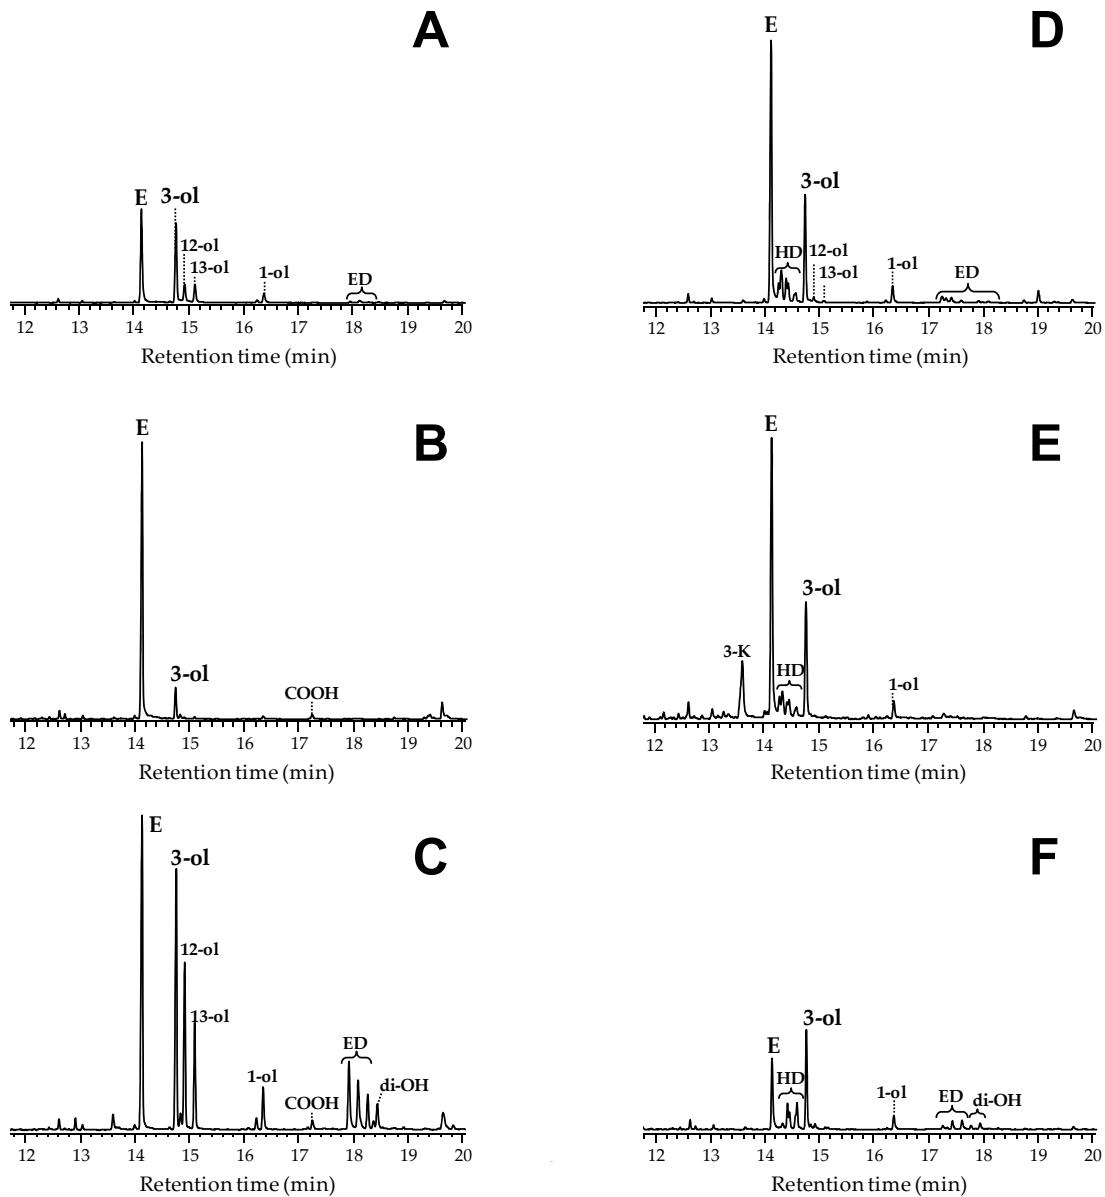

Figure S3. GC-MS analysis of 1-tetradecene (1 mM) reactions (2 h) with 3 μ M *AaeUPO* (A), *MroUPO* (B), *rCclUPO* (C), *CglUPO* (D), *rHinUPO* (E) and *rDcaUPO* (F). The main products are 1,2-epoxytetradecane (E) and several monohydroxy alkenes (1-ol, 3-ol, 12-ol and 13-ol), together with some epoxy derivatives (ED) and dihydroxy (di-OH) and carboxylic (COOH) alkene derivatives. The chromatograms are normalized to same total-ion vertical scale for comparison.

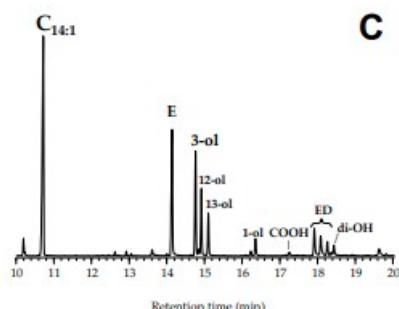

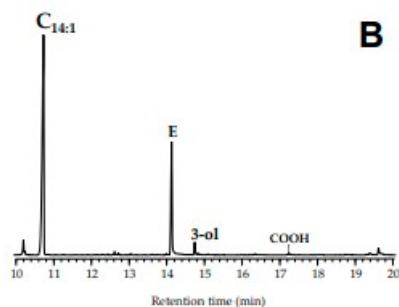

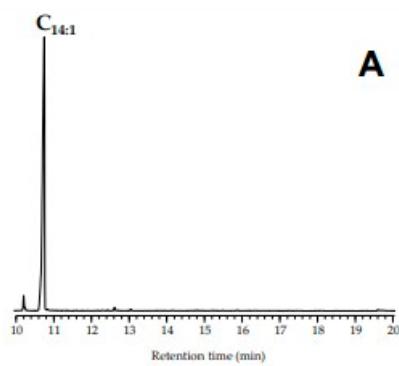

Figure S4. GC-MS analysis of 1-tetradecene (1 mM) reactions (2 h) including control reaction with 3 mM H₂O₂ and without enzyme (A), enzymatic reaction with 3 μ M MroUPO and 3 mM H₂O₂ (B) and enzymatic reaction with 3 μ M rCciUPO and 3 mM H₂O₂ (C)..
