## Betaxanthins obtention

## Betanin obtention

**Supplementary Scheme SI.** Betalains obtention workflow. Betaxanthins were produced biotechnologically using a DODA enzyme expressed in an *E. coli* host. Betanin was obtained by extraction from *Beta vulgaris* roots.

**Supplementary Scheme SII.** Experimental design scheme for different *C. elegans* strains treatment with betalains and subsequent assays.

**Supplementary Table 1:** Lifespan assays survival data

| Strain            | Treatment                   | n° | Mean               |      |             | Lifespan<br>Change<br>(%) | <i>p</i> value vs<br>Control |
|-------------------|-----------------------------|----|--------------------|------|-------------|---------------------------|------------------------------|
|                   |                             |    | Lifespan<br>(days) | S. E | 95 ci       |                           |                              |
| JK1466 [gld-1(-)] | Control                     | 48 | 7.92               | 0.12 | 7.68 ~ 8.16 | 0                         |                              |
|                   | Yellow P. P. Extract (1%)   | 60 | 8.5                | 0.15 | 8.21 ~ 8.79 | 7.32                      | 2.30E-06                     |

|                   |                             |    |                    |      |             |                           |                              |

**Supplementary Figure S1.** HPLC analyses of the extracts employed. HPLC chromatograms for: (A) beetroot extract, (B) red prickly pear extract, (C) pure betanin used as control, (D) yellow prickly pear extract and (E) pure indicaxanthin used as control.

**Supplementary Figure S2.** Betalains stability in *C. elegans* S. medium after 48 hours at 20 °C in the dark. The betalain content in the medium was obtained by measuring its absorbance spectrophotometrically at 536 nm for betanin and 480 nm for the betaxanthins (tryptophan-bx, phenylalanine-bx, dopaxanthin and indicaxanthin) at t=0 and t=48 h.

**Supplementary Figure S3.** Survival plots for *C. elegans gld-1* mutants treated with betalain-containing natural extracts and pure betalains. Natural extracts (**A**). Pure betalains (**B**). Survival plots for *C. elegans* CF 1038 [*daf-16(mu86)*] treated with tryptophan-betaxanthin, betanin and yellow and red prickly pears extracts (**C**).
