a) The numbering of amino acids in this table corresponds to the position of the chimeric protein RBD-CD.

b) D means potential N-glycosylation sites that were transformed into Asp residues by PNGase F. **nem** corresponds to residues of free cysteine residues in the protein that were alkylated by N-ethylmaleimide in the processing of the sample before treatment with PNGase F. Lines connecting cysteine residues indicate disulfide bonds.

Supplementary Figure S1. Health monitoring in non-human primates. A) Schematic representation of overall study design. NHPs were intramuscularly immunized with 50 µg of RBD-CD or PBS (Placebo) using alum as an adjuvant on 0 and 21 days. Blood collection were performed at times 0, 42 and 228 for hematological and biochemical tests. B) Body temperature, C) Weight measured at different days post first injection. The dashed lines mark the acceptable temperature range reported for cynomolgus macaques.

Supplementary Table S3. Hematological and biochemical parameter values of NHP before the first immunization.
