

**Supplementary material for paper by Isakova-Sivak et al. “Recombinant live attenuated influenza vaccine viruses carrying conserved T-cell epitopes of human adenoviruses induce functional cytotoxic T-cell responses and protect mice against both infections”**

**Table S1.** Experimentally established T- and B-cell epitopes of Human Adenoviruses deposited in the Immune Epitope Database (IEDB)

Viral protein	Total 320	T-cell epitopes					B-cell epitopes	
		Human		Mouse			B all	Human
		MHC I	MHC II	H2-b	H2-d	MHC II		
<b>Human mastadenovirus E</b>	1							
Hexon	1						1	
<b>Human mastadenovirus B</b>	69							
Fiber	24						24	
Hexon	43	12	0				31	
pVII	2		2					
<b>Human mastadenovirus C</b>	251							
Hexon	159	39	124		1		9	5
Fiber	40	1	2				38	
DNA polymerase	3	1	2					
DNA-binding protein	2			1	2			
E1B 55 kDa protein	7			6		1		
E1B protein, small T-antigen	2		1					1
Early E1A protein	10	1	2	7				4
Hexon-interlacing protein	2		2					
I-leader protein	1	1						
23K endopeptidase	1							1
Packaging protein 3	1		1					
Penton protein	12	8	5					1
Pre-core protein X	1							1
Pre-early 3 receptor internalization and degradation alpha protein	1		1					
Pre-hexon-linking protein VIII	3		3					
Pre-histone-like nucleoprotein	2		1					1
Pre-protein VI	2		2					
Adenovirus death protein	1		1					

**Table S2.** Experimentally established T-cell epitopes located within human adenovirus hexon region 855-935

<sup>1</sup> – AdV serotype used in the original study;

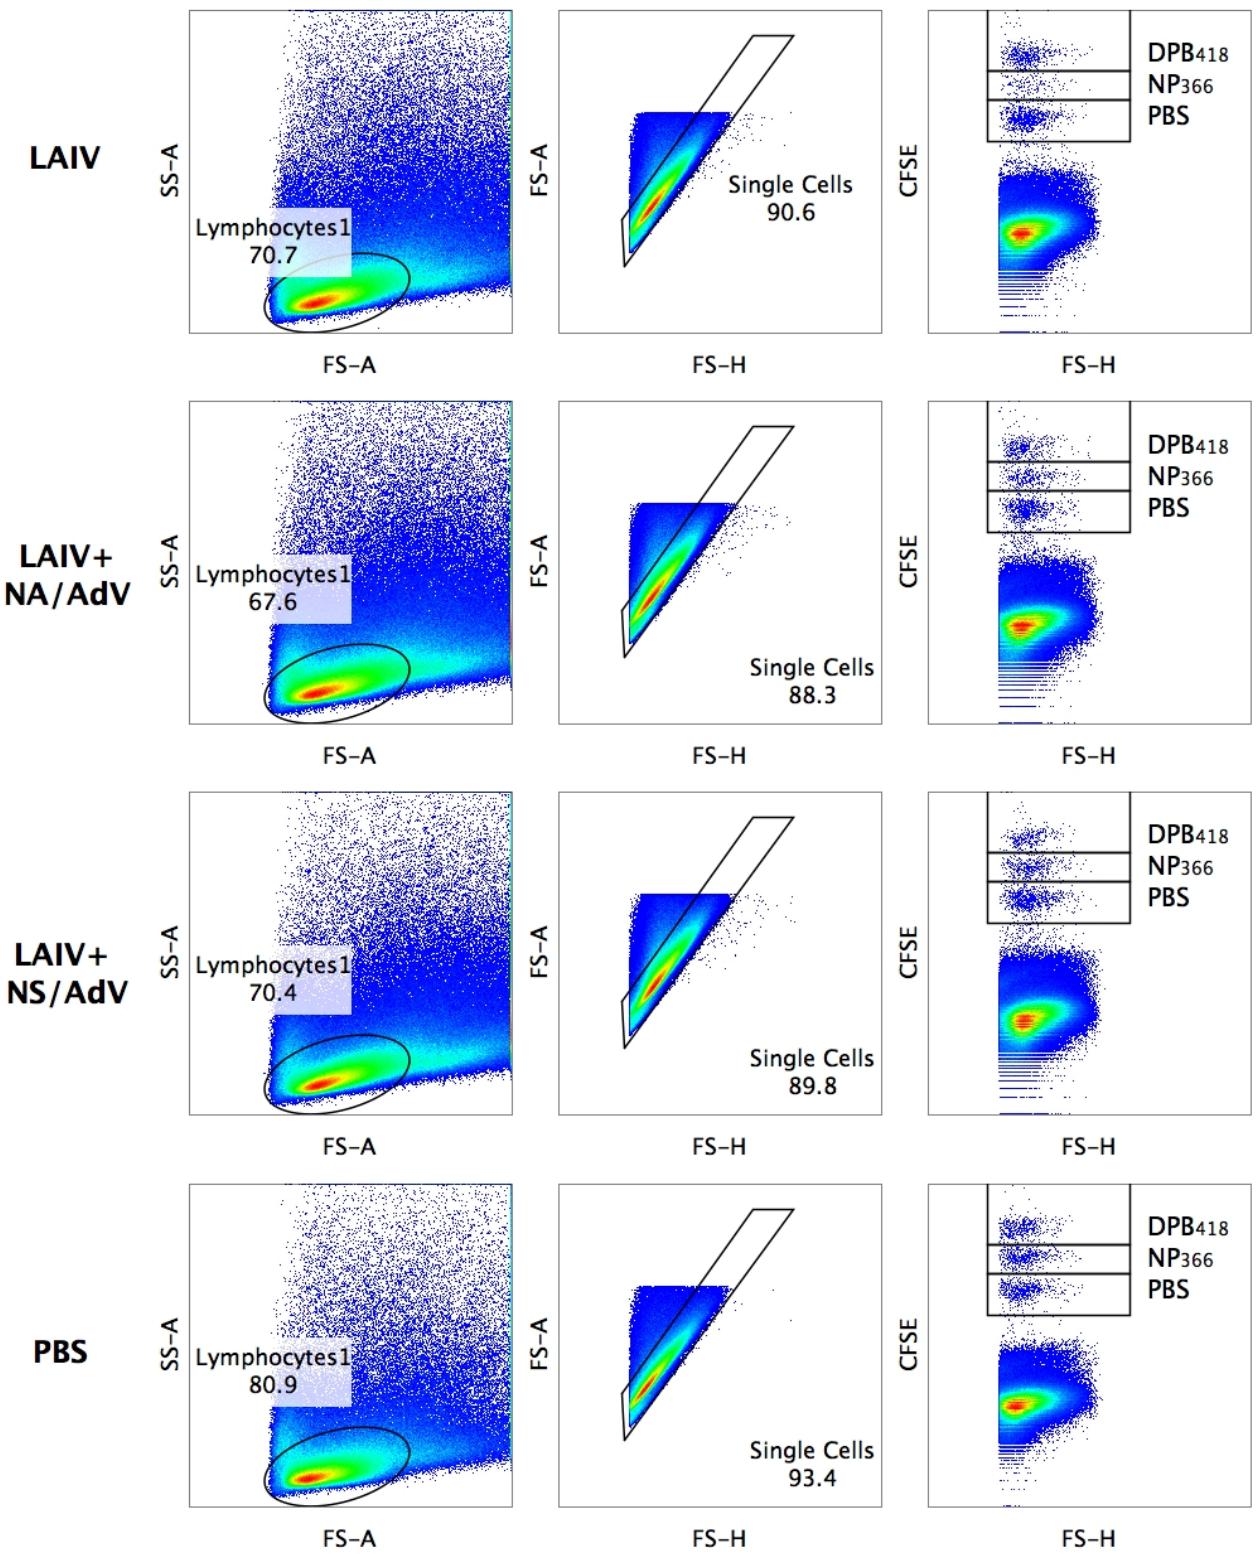

<sup>2</sup> – T-cell assays used in these studies;

<sup>3</sup> – according to the IEDB data;

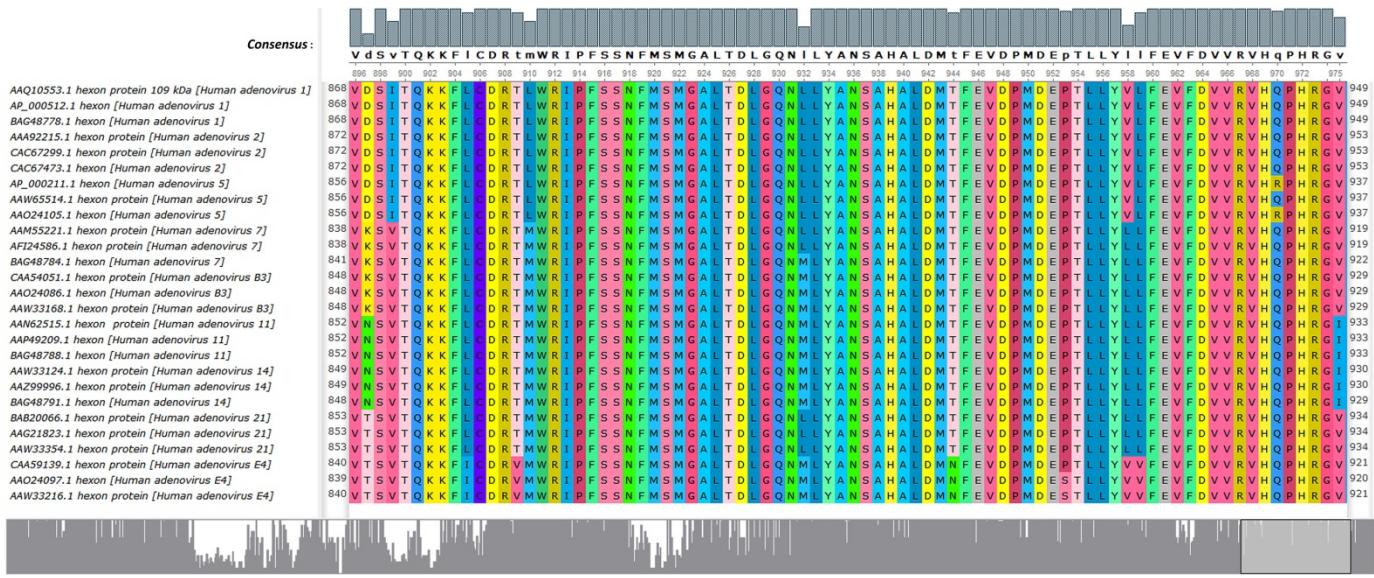

<sup>4</sup> – cross-reactivity is shown based on sequence identity; experimental confirmation for cross-reactivity with this serotype is shown in parenthesis.

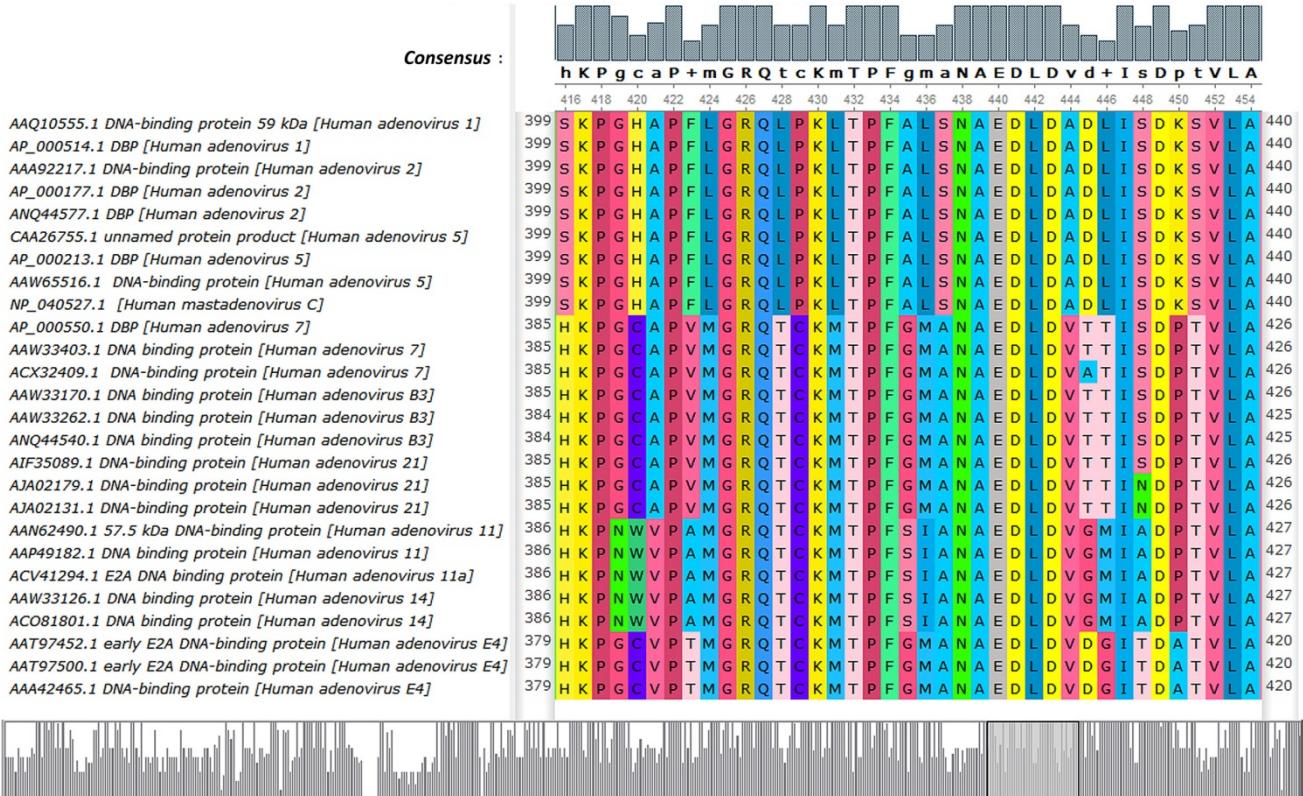

**Figure S1.** Gating strategy for the assessment of effector memory CD8 T-cell responses in mice using intracellular cytokine staining assay.

**Figure S2.** Gating strategy for CTL *in vivo* assay.

**Figure S3.** Alignment of a C-terminus fragment of AdV hexon (residues 855-935) among various AdV serotypes belonging to different AdV groups. Upper histogram shows conservancy of the amino acids within the selected fragment. Lower histogram shows the overall conservancy of the whole hexon protein, with the selected fragment depicted in the frame.

**Figure S4.** Alignment of a DBP region (residues 400-438) among various AdV serotypes belonging to different AdV groups. Upper histogram shows conservancy of the amino acids within the selected fragment. Lower histogram shows the overall conservancy of the whole DBP, with the selected fragment depicted in the frame.
